## Sm Chemistry Aie:

Aggregation-Induced Emission (AIE) Jianwei Xu, Ming Hui Chua, Ben Zhong Tang, 2022-04-17 *Aggregation Induced Emission AIE A Practical Guide* introduces readers to the topic guiding them through fundamental concepts and the latest advances in applications. The book covers concepts, principles, and working mechanisms of AIE in AIE active luminogens with different classes of AIE luminogens reviewed including polymers, three dimensional frameworks, MOFs and COFs and supramolecular gels. Special focus is given to the structure-property relationship, structural design strategies, targeted properties, and application performance. The book provides readers with a deep understanding not only on the fundamental principles of AIE but more importantly on how AIE luminogens and AIE properties can be incorporated in material development. Provides the fundamental principles, design and synthesis strategies of aggregation-induced emission materials. Reviews the most relevant applications in materials design for stimuli-responsive materials, biomedical applications, chemo-sensing and optoelectronics. Emphasizes structural design and its connection to aggregation-induced emission properties, also exploring the structure-property relationship. *Aggregation-Induced Emission* Xinggui Gu, Ben Zhong Tang, 2022-03-21 This two-volume set introduces the up-to-date high-tech applications of Aggregation-Induced Emission (AIE) luminogens mainly in the areas of biosensing, bioimaging, and biomedicine. The 1st volume covers the applications of AIE materials in biosensing and bioimaging, including the technological utilizations in ionic biomolecular sensing, bacterial imaging, cell imaging, intracellular microenvironment analysis, advanced optical imaging, and multimodality, etc. It is an essential reference for materials scientists, chemists, physicists, and biological chemists. **Aggregation-Induced Emission** Youhong Tang, Ben Zhong Tang, 2021-11-05 The series *Topics in Current Chemistry Collections* presents critical reviews from the journal *Topics in Current Chemistry* organized in topical volumes. The scope of coverage is all areas of chemical science, including the interfaces with related disciplines such as biology, medicine, and materials science. The goal of each thematic volume is to give the non-specialist reader, whether in academia or industry, a comprehensive insight into an area where new research is emerging, which is of interest to a larger scientific audience. Each review within the volume critically surveys one aspect of that topic and places it within the context of the volume as a whole. The most significant developments of the last 5 to 10 years are presented using selected examples to illustrate the principles discussed. The coverage is not intended to be an exhaustive summary of the field or include large quantities of data but should rather be conceptual, concentrating on the methodological thinking that will allow the non-specialist reader to understand the information presented. Contributions also offer an outlook on potential future developments in the field.
