Handbook of Thermal Analysis and Calorimetry Richard B. Kemp, 1999-12-13 The applications and interest in thermal analysis and calorimetry have grown enormously during the last half of the 20th century These techniques have become indispensable in the study of processes such as catalysis hazards evaluation etc and in measuring important physical properties quickly conveniently and with markedly improved accuracy Consequently thermal analysis and calorimetry have grown in stature and more scientists and engineers have become at least part time practitioners People new to the field therefore need a source of information describing the basic principles and current state of the art The last volume of this 4 volume handbook devoted to many aspects of biological thermal analysis and calorimetry completes a comprehensive review of this important area All chapters have been prepared by recognized experts in their respective fields The approach taken is how and what to do and when to do it The complete work is a valuable addition to the already existing literature

Evaluation of Quality of Fruits and Vegetables Harold E. Pattee, 2012-12-06 Acceptance or rejection of any edible commodity whether it is raw or processed is usually conditioned by sensory stimuli The impact of these stimuli on the decision making process is broadly termed sensory evaluation Advances in sensory evaluation research have been slow in the past because of the human factor the necessity to use highly trained sensory panels to conduct this research High technology in instrumentation and new understandings of sensory evaluations are now combining to make possible quantum jumps forward in sensory evaluation research It is widely recognized that the sensory aspects of fruits and vegetables are affected by many factors among them environment variety cultural practices and handling practices However if one attempts to find a general reference or compilation of findings regarding this subject area there seems to be few if any available A survey of the literature does suggest that in the past few years research into specific factors which influence the sensory aspects of fruits and vegetables has increased significantly This increased interest in sensory research and the renewed national awareness of the value of research into pre and postharvest quality of fruits and vegetables prompted the Flavor Subdivision Agricultural and Food Chemistry Division American Chemical Society to sponsor a symposium entitled Sensory Evaluation of Fruits and Vegetables Effect of Environment Cultural Practices and Variety during the 1982 meeting in Kansas City Missouri
