Tenseless Theory Of Time A Critical Examination:

The Tenseless Theory of Time W.L. Craig, 2013-03-09 he present book and its companion volume The Tensed Theory of Time a T Critical Examination are an attempt to adjudicate what one recent discussant has called the most fundamental question in the philosophy of time namely whether a static or a dynamic conception of the world is correct I had originally intended to treat this question in the space of a single volume but the study swelled into two I found that an adequate appraisal of these two competing theories of time requires a wide ranging discussion of issues in metaphysics philosophy of language phenomenology philosophy of science philosophy of space and time and even philosophy of religion and that this simply could not be done in one volume If these volumes succeed in making a contribution to the debate it will be precisely because of the synoptic nature of the discussion therein Too often the question of the nature of time has been prematurely answered by some philosopher or physicist simply because he is largely ignorant of relevant discussions outside his chosen field of expertise In these two complementary but independent volumes I have attempted to appraise what I take to be the most important arguments drawn from a variety of fields for and against each theory of time

The Tensed Theory of Time W.L. Craig, 2013-04-18 he present book and its companion volume The Tenseless Theory of Time a T Critical Examination are an attempt to adjudicate what one recent discussant has called the most fundamental question in the philosophy of time namely whether a static or a dynamic conception of the world is correct I had originally intended to treat this question in the space of a single volume but the study swelled into two I found that an adequate appraisal of these two of time requires a wide ranging discussion of issues in competing theories metaphysics philosophy of language phenomenology philosophy of science philosophy of space and time and even philosophy of religion and that this simply could not be done in one volume If these volumes succeed in making a contribution to the debate it will be precisely because of the synoptic nature of the discussion therein Too often the question of the nature of time has been prematurely answered by some philosopher or physicist simply because he is largely ignorant of relevant discussions outside his chosen field of expertise In these two complementary but independent volumes I have attempted to appraise what I take to be the most important arguments drawn from a variety of fields for and against each theory of time

The Tenseless Theory of Time W.L. Craig, 2000-11-30 The central question in the philosophy of time is whether time is tensed or tenseless viz whether the moments of time are objectively past present or future or whether they are ordered merely by the tenseless temporal relations earlier than simultaneous with and later than In this book and the companion volume The Tensed Theory of Time A Critical Examination Craig undertakes the first thorough appraisal of the arguments for and against the tensed and tenseless theories of time The discussions range widely over issues in the philosophy of language phenomenology relativity theory philosophy of space and time metaphysics and philosophy of religion The Tenseless Theory of Time sets out to discover whether the ineliminability of tense from language and our experience of tense warrants a belief in its objective ontological

status or whether the defeaters raised by McTaggart's paradox and the Myth of Passage serve to undermine any warrant that the tensed theory of time may be supposed to enjoy

Time and the Metaphysics of Relativity W.L. Craig, 2013-11-11

he present volume is part of a larger project which is the attempt to draft a coherent doctrine of divine eternity and God's relationship to time In my God I Time and Eternity I argued that whether one construes divine eternity in terms of timelessness or of omnitemporality will depend crucially upon one's views about the objectivity of tensed facts and temporal becoming If one adopts a tensed or in McTaggart's terminology an A Theory of time then a coherent doctrine of divine eternity requires that one construe God at least since the moment of creation to exist temporally which implies that divine timelessness can be successfully maintained only if a tenseless or B Theory of time is correct Accordingly in my companion volumes *The Tensed Theory of Time a Critical Examination* and *The Tenseless Theory of Time a Critical Examination* I set for myself the task of adjudicating the A vs B Theory of time In the former volume I examine arguments for and against the A Theory of time and in the latter I turn to an examination of arguments for and against the B Theory This inquiry took me into a study of relativity theory its presuppositions and implications The paucity of integrative literature dealing with the concept of God and relativity theory is striking

Mystery Of Time, The: Asymmetry Of Time And Irreversibility In The Natural Processes Alexander Leonidovich Kuzemsky, 2022-10-14

The book focuses on the study of the temporal behavior of complex many particle systems The phenomenon of time and its role in the temporal evolution of complex systems is a remaining mystery The book presents the necessity of the interdisciplinary point of view regarding on the phenomenon of time The aim of the present study is to summarize and formulate in a concise but clear form the trends and approaches to the concept of time from a broad interdisciplinary perspective exposing tersely the complementary approaches and theories of time in the context of thermodynamics statistical physics cosmology theory of information biology and biophysics including the problem of time and aging Various approaches to the problem show that time is an extraordinarily interdisciplinary and multifaceted underlying notion which plays an extremely important role in various natural complex processes

The New Theory of Time Professor L Nathan Oaklander, University Distinguished Faculty Scholar and Professor of Philosophy Quentin Smith, 1994-01-01

The most important debate among twentieth century philosophers of time has been whether events that have happened are happening or will happen are equally real the tenseless theory of time or whether there is a fundamental distinction between past present and future with only present events possessing full existence the tensed theory In the 1980s a new version of the tenseless theory of time emerged While advocates still posit that all events are equally real they depart from the old tenseless theory by conceding that tensed expressions cannot be translated into tenseless ones and support their view of time using other arguments This anthology offers the latest turns in the debate over the new theory of time with essays written by many of the most prominent contemporary thinkers in the philosophy of time There are discussions on the role or nonrole of language in determining which theory is true McTaggart's paradox and the logical difficulties that

defenders of the tenseless theory say are inherent in tensed theory and the nature of our experience of time which proponents of both theories claim can now be explained The Preface and the General Introduction to the book set the debate within the wider philosophical context and show why the subject of temporal becoming is a perennial concern of science religion language logic and the philosophy of mind BOOK JACKET Title Summary field provided by Blackwell North America Inc All Rights Reserved

Science and Religion in Dialogue Melville Y. Stewart, 2009-12-01 This two volume collection of cutting edge thinking about science and religion shows how scientific and religious practices of inquiry can be viewed as logically compatible complementary and mutually supportive Features submissions by world leading scientists and philosophers Discusses a wide range of hotly debated issues including Big Bang cosmology evolution intelligent design dinosaurs and creation general and special theories of relativity dark energy the Multiverse Hypothesis and Super String Theory Includes articles on stem cell research and Bioethics by William Hurlbut who served on President Bush's Bioethics Committee

The Kalam Cosmological Argument, Volume 2 Paul Copan, William Lane Craig, 2017-11-16 The ancient kalam cosmological argument maintains that the series of past events is finite and that therefore the universe began to exist Two recent scientific discoveries have yielded plausible prima facie physical evidence for the beginning of the universe The expansion of the universe points to its beginning to a Big Bang as one retraces the universe's expansion in time And the second law of thermodynamics which implies that the universe's energy is progressively degrading suggests that the universe began with an initial low entropy condition The kalam cosmological argument perhaps the most discussed philosophical argument for God's existence in recent decades maintains that whatever begins to exist must have a cause And since the universe began to exist there must be a transcendent cause of its beginning a conclusion which is confirmatory of theism So this medieval argument for the finitude of the past has received fresh wind in its sails from recent scientific discoveries This collection reviews and assesses the merits of the latest scientific evidences for the universe's beginning It ends with the kalam argument's conclusion that the universe has a cause a personal cause with properties of theological significance

The Withdrawal of Rights O. Ezra, 2013-06-29 Like most discussions within the tradition of rights talk this study is motivated by the desire to promote the idea that rights are moral assets that people should acquire in the course of their membership within social and political frameworks However while most participants in rights talk concentrate on the safety and protection constraints required for a successful exercising of rights the present study inquires into the circumstances under which people's rights lose their validity The author believes that if we want to prevent the erosion of the role of rights within society and to encourage their obligatory status we should prevent their misuse or their unjustified or excessive use Those who have interests in rights and are concerned about their withdrawal or denial will find a unique and inventive way of dealing both with the use as well as the abuse of rights

The Limits of Logical Empiricism Arthur Pap, 2006-03-02 This volume collects some of the most significant papers of Arthur Pap Pap's work played an important role

in the development of the analytic tradition This goes beyond the merely historical fact of Pap s influential views of dispositional and modal concepts Pap s writings in philosophy of science modality and philosophy of mathematics provide insightful alternative perspectives on philosophical problems of current interest **Philosophical Lectures on Probability**

Bruno de Finetti,2008-05-01 Bruno de Finetti 1906 1985 is the founder of the subjective interpretation of probability together with the British philosopher Frank Plumpton Ramsey His related notion of exchangeability revolutionized the statistical methodology This book based on a course held in 1979 explains in a language accessible also to non mathematicians the fundamental tenets and implications of subjectivism according to which the probability of any well specified fact F refers to the degree of belief actually held by someone on the ground of her whole knowledge on the truth of the assertion that F obtains **Dynamic Epistemic Logic** Hans van Ditmarsch,Wiebe van der Hoek,Barteld Kooi,2007-05-06 Dynamic

Theoretical Knowledge Viacheslav Semenovich Stepin,2005-07-12 He shows direct and inverse links between foundations of science and new theories and empirical facts evolved from those how among many potentially possible histories of science a culture selects just those directions which become a real history of science The author analyses mechanisms of the generation of scientific theories and shows that those are changed in the process of historical development of science He displays three historical types of scientific rationality classical non classical and post non classical which appears in modern science and shows features of their coexistence and interplay It is shown that along with the emerging of post non classical rationality science increases the sphere of its worldview applications Science begins to correlate not only with the basic values of technogenic civilization but also with some values and patterns of traditional cultures Visualization, Explanation and Reasoning Styles in Mathematics P. Mancosu,Klaus Frovin Jørgensen,S.A.

Pedersen,2006-03-30 In the 20th century philosophy of mathematics has to a great extent been dominated by views developed during the so called foundational crisis in the beginning of that century These views have primarily focused on questions pertaining to the logical structure of mathematics and questions regarding the justification and consistency of mathematics Paradigmatic in this respect is Hilbert s program which inherits from Frege and Russell the project to formalize all areas of ordinary mathematics and then adds the requirement of a proof by epistemically privileged means nitistic reasoning of the consistency of such formalized theories While interest in modified versions of the original foundational programs is still thriving in the second part of the twentieth century several philosophers and historians of mathematics have questioned whether such foundational programs could exhaust the realm of important philosophical problems to be raised

about the nature of mathematics Some have done so in open confrontation and hostility to the logically based analysis of mathematics which characterized the classical foundational programs while others and many of the contributors to this book belong to this tradition have only called for an extension of the range of questions and problems that should be raised in connection with an understanding of mathematics The focus has turned thus to a consideration of what mathematicians are actually doing when they produce mathematics Questions concerning concept formation understanding heuristics changes in style of reasoning the role of analogies and diagrams etc

Philosophical Dimensions of Logic and Science Artur Rojszczak, Jacek Cachro, Gabriel Kurczewski, 2013-04-17 Philosophical Dimensions of Logic and Science is a collection of outstanding contributed papers presented at the 11th International Congress of Logic Methodology and Philosophy of Science held in Kraków in 1999 The Congress was a follow up to the series of meetings initiated once by Alfred Tarski which aimed to provide an interdisciplinary forum for scientists philosophers and logicians The articles selected for publication in the book comply with that idea and innovatively address current issues in logic metamathematics philosophy of language philosophy of science and cognitive science as well as philosophical problems of biology chemistry and physics The volume will be of interest to philosophers logicians and scientists interested in foundational problems of their disciplines

Formal Ontology and Conceptual Realism Nino B. Cocchiarella, 2007-09-05 Theories about the ontological structure of the world have generally been described in informal intuitive terms This book offers an account of the general features and methodology of formal ontology The book defends conceptual realism as the best system to adopt based on a logic of natural kinds By formally reconstructing an intuitive informal ontological scheme as a formal ontology we can better determine the consistency and adequacy of that scheme

The Dynamics of Thought Peter Gardenfors, 2005-07 This volume is a collection of some of the most important philosophical papers by Peter Gardenfors Spanning a period of more than 20 years of his research they cover a wide ground of topics from early works on decision theory belief revision and nonmonotonic logic to more recent work on conceptual spaces inductive reasoning semantics and the evolutions of thinking Many of the papers have only been published in places that are difficult to access The common theme of all the papers is the dynamics of thought Several of the papers have become minor classics and the volume bears witness of the wide scope of Gardenfors research and of his crisp and often witty style of writing The volume will be of interest to researchers in philosophy and other cognitive sciences

parallelism between Wittgenstein interpretation and the move from metaphysics to language to postmodernism effected in the twentieth century **Attitudes and Changing Contexts** Robert van Rooij, 2006-03-30 In this book the author defends a unified externalists account of propositional attitudes and reference and formalizes this view within possible world semantics He establishes a link between philosophical analyses of intentionality and reference and formal semantic theories of discourse representation and context change Stalnakerian diagonalization plays an important role here Anaphora are treated as referential expressions while presupposition is seen as a propositional attitude The relation between belief change and the semantic analyses of conditional sentences and evidential knowledge and buletic desire propositional attitudes is discussed extensively *Optic Flow and Beyond* L.M. Vaina, Scott A. Beardsley, Simon K. Rushton, 2004-04-30 Optic flow provides all the information necessary to guide a walking human or a mobile robot to its target Over the past 50 years a body of research on optic flow spanning the disciplines of neurophysiology psychophysics experimental psychology brain imaging and computational modelling has accumulated Today when we survey the field we find independent lines of research have now converged and many arguments have been resolved simultaneously the underpinning assumptions of flow theory are being questioned and alternative accounts of the visual guidance of locomotion proposed At this critical juncture this volume offers a timely review of what has been learnt and pointers to where the field is going
