Termite biology and social behaviour have been addressed comprehensively Trail pheromones are responsible for the orientation and recruitment of nestmates to the food sources Once arriving at a potential food source termites assess its quality using a different set of cues A separate chapter on trail pheromones cues used during foraging and food assessment with preferences for foraging sites contributes a wealth of information Emphasis has been given on reviewing ecological benefits of termites in other chapters The information with respect to termite species as an edible insect and the overall role it plays in food and nutrition security in Africa is quite informative A separate chapter dealing with importance of termites and termitaria in mineral exploration constitutes a significant step in addressing the economic importance of this insect group
