**Visual Diagnosis and Care of the Patient with Special Needs** Marc B. Taub, Mary Bartuccio, Dominick Maino, 2012-09-26 *Visual Diagnosis and Care of the Patient with Special Needs* provides a thorough review of the eye and vision care needs of patients with special needs. This book gives you a better understanding of the most frequently encountered developmental and acquired disabilities seen in the eye care practitioner's office. These disabilities include patients with autism, brain injury, Fragile X syndrome and Down syndrome, as well as those with psychiatric illness, dual diagnosis and more. The text discusses in great detail the visual issues inherent in these populations and their possible treatment. A group of authors with approximately 500 years of experience in

the field of eye care and special populations have been brought together to develop this comprehensive reference. It may appear that this book is written primarily for eye care practitioners such as optometrists and ophthalmologists while vision is the overriding topic; this book serves as an excellent resource for a multitude of professions including those engaged in occupational therapy, physical therapy, speech and language therapy, psychiatry, social work, pediatric medicine, and special education.

Dyslexia in Practice Janet Townend, Martin Turner, 2012-12-06

Dyslexia is a specific learning difficulty that hinders the learning of literacy skills This problem with managing verbal codes in memory is neurologically based and tends to run in families Other symbolic systems such as mathematics and musical notation can also be affected Dyslexia can occur at any level of intellectual ability It can accompany but is not a result of lack of motivation emotional disturbance sensory impairment or meagre opportunities The effects of dyslexia can be alleviated by skilled specialist teaching and committed learning Moreover many dyslexic people have visual and spatial abilities which

In the last decade neuropsychology has grown from a small subspecialty to a major component in the practice of clinical and medical psychology This growth has been caused by advances in psychological testing such as the Halstead Reitan neuropsychological battery as discussed in Chapter 5 that have made evaluation techniques in the field available to a wider audience by advances in neuroradiology and related medical areas that have enabled us to better understand the structure and function of the brain in living individuals without significant potential harm to those individuals and by increased interest by psychologists and other scientists in the role that the brain plays in determining behavior Many disorders that were believed by many to be caused purely by learning or environment have been shown to relate at least in some cases to brain dysfunction or damage With the growth of the field there has been increased interest in the work of neuropsychologists by many who are not in the field
