Transitions in Work and Learning Board on Testing and Assessment, Division of Behavioral and Social Sciences and Education, National Research Council, 1997-09-19 The dramatic shift in the American labor market away from manufacturing and the growing gap in earnings between high school and college graduates have contributed to a sense of alarm about the capacity of the nation's schools to supply adequately skilled graduates to the work force The role that schools can or should play in preparing people to enter the world of work is hotly debated In an effort to nurture the important and ongoing national dialogue on these issues the Board on Testing and Assessment asked researchers

and policymakers to engage in an interdisciplinary review and discussion of available data and implications for assessment policy Transitions in Work and Learning considers the role of assessment in facilitating improved labor market transitions and life long learning of American workers It addresses the apparent mismatch between skill requirements of high performance workplaces and skills acquired by students in school the validity of existing assessment technologies to determine skills and competencies of persons entering various occupations and ethical and legal issues in the implementation of new testing and certification programs The book also examines the role of assessment in determining needed skills developing ongoing education and training and providing information to employers prospective workers and schools

Working Memory and Human Cognition John T. E. Richardson, Randall W. Engle, Lynn Hasher, Robert H. Logie, Ellen R. Stoltzfus, Rose T. Zacks, 1996-05-16 This new volume in the Counterpoints series compares and contrasts different conceptions of working memory generally recognized as the human cognitive system responsible for temporary storage of information The book includes proponents of several different views Robert Logie discusses the theoretical and empirical utility of separating working memory into an articulatory loop a phonological store and a visuo spatial sketchpad into visual and spatial subsystems Patricia Carpenter provides evidence for a process view of working memory arguing that both task specific processing and general processing capabilities can account for the full range of working memory phenomena She focuses on findings from reading comprehension and memory tasks suggesting that working memory is used to represent the set of skills and strategies necessary for complex tasks while retaining residual capacity for use as a storage buffer Lynn Hasher argues in favor of the new inhibitory model with evidence drawn from the literature on aging and pathology that demonstrates parallels between memory disorders and normal memory functioning Randall Engle addresses the issue of whether working memory resources are required for retrieval of information or whether that task is relatively automatic Engle's empirical studies in turn bear directly on the positions of Carpenter Hasher and Logie As interest in working memory is increasing at a rapid pace an open discussion of the central issues involved is both useful and timely This work serves this purpose for a wide audience of cognitive psychologists and their students

The Pursuit of Excellence Through Education Michel Ferrari, 2001-12-01

Although specific definitions may change over time few goals are considered more important to education than the pursuit of academic excellence There are many different viewpoints on this issue today among educational psychologists and other social scientists One particularly glaring fault line in the debate divides those who emphasize developing individual learning and those who focus on promoting cultural and institutional reform These two perspectives are rarely addressed in a single volume In this book well known theorists and researchers present a range of perspectives on how to promote excellence in education This allows those who stress transformation of educational practice and those who emphasize individual abilities to speak to each and invites readers to jointly consider the arguments for both positions or for some synthesis of the two The point is to consider how these two divergent viewpoints can be reconciled or simply coordinated in an effort to benefit both students and society at large The main thesis is that excellence can be fostered without sacrificing equity both of which are fundamental tenets of a democratic education The issues addressed in this book have implications and relevance for school reform efforts and across the fields of educational psychology curriculum and instruction philosophy of education and educational leadership The volume provides a unique source for students and teachers in various disciplines who want to gain a broader and more integrated view of the nature and development of excellence through education
