Tettigoniidae of Australia Volume 2 DCF Rentz,1993-01-01 This volume covers three subfamilies all endemic to Australia The Phasmodinae are a small group with one genus and four species living in the heath habitats of Western Australia The Zaprochilinae are represented in the literature by two genera each with a single species This volume reveals that four genera are present in Australia one with more than twelve species Like the Phasmodinae the Zaprochilinae feed on flowers but unlike that group where the flower is destroyed evidence suggests that only pollen and nectar are eaten and the flower remains intact *Tettigoniidae of Australia Volume 3* David Rentz,2001-08-03 This third volume in the series will assist with identification and study of this important genus Specialised collecting techniques and the rearing of immature specimens have yielded many more species than would otherwise have been recorded using only normal collecting techniques The work accounts for four subfamilies two of which the Tympanophorinae and Microtettigoniinae are endemic to Australia Each of these endemic subfamilies is represented by a single genus containing several species Tettigonidae of Australia Volume 3 will be a valuable resource for orthoptera researchers and academics general entomologists as well as those with an interest in the ecology and conservation issues related to grasshoppers **A Guide to the Katydids of Australia** David Rentz,2010-06-09 Katydids are among the most commonly seen Australian insects They range in size from about 5 mm to well over 90 mm and occur in many habitats all over Australia Katydids are masters of deception imitating twigs bark leaves and stems as well as other insects A few are brightly coloured and are distasteful to predators They continue to be research subjects in many university curricula where students study their behaviour acoustical physiology and ecology A Guide to the Katydids of Australia explores this diverse group of insects from the family Tettigoniidae which comprises more than 1000 species in Australia including Norfolk and Lord Howe islands It highlights their relationships to plants humans and the environment and includes colour photographs of many species 2011 Whitley Award Commendation for Field Guide **The Songs of the Grasshoppers and Crickets of Western Europe** David R.
