Sametinger,2013-04-17 Software is rarely built completely from scratch To a great extent existing software documents source code design documents etc are copied and adapted to fit new requirements Yet we are far from the goal of making reuse the standard approach to software development Software reuse is the process of creating software systems from existing software rather than building them from scratch Software reuse is still an emerging discipline It appears in many different forms from ad hoc reuse to systematic reuse and from white box reuse to black box reuse Many different products for reuse range from ideas and algorithms to any documents that are created during the software life cycle Source code is most commonly reused thus many people misconceive software reuse as the reuse of source code alone Recently source code and design reuse have become popular with object oriented class libraries application frameworks and design patterns Software components provide a vehicle for planned and systematic reuse The software community does not yet agree on what a software component is exactly Nowadays the term component is used as a synonym for object most of the time but it also stands for module or function Recently the term component based or component oriented software development has become popular In this context components are defined as objects plus some thing What something is exactly or has to be for effective software development remains yet to be seen However systems and models are emerging to support that notion

The Advanced TEXbook David Salomon, 2012-12-06 Why is LEX so hard to use is the most frequent comment complaint made by frustrated LEX users The answer Because it is programmable has many features commonly found in programming languages because it pays attention to detail and because its creator has developed it for his own use perhaps also his administrative assistant s and not for general use The material presented here is a direct result of this complaint and is an attempt to make it easier for inexperienced users to get the kind of high quality typesetting that is possible with LEX The material is based on classes

taught since 1985 and on the author's personal experience with LEX which includes writing three books and numerous articles handouts and letters Both introductory and advanced material is included here There are many examples as well as a detailed discussion of topics such as valign and emergencystretch that are only briefly touched upon in The TpJXbook Chapter 20 describes the macros used to typeset this book it also lists the METAFONT programs for the special characters used
