More Than a Health Crisis Jessica Kirk, 2023-10-24 How the West African Ebola epidemic was transformed from an urgent and distant tragedy into an existential threat to American lives establishing the dynamics that would later dominate the US response to epidemics such as COVID 19 In 2014 and 2015 the viral Ebola epidemic in West Africa inspired breathless US media coverage and became the subject of heated public debate over just how to understand the security issue that the outbreak presented Was it a security concern because of the lives at risk in West Africa Or because of its threat to regional and global stability Or was it potentially a threat to the American people In *More Than a Health Crisis* Jessica Kirk reveals how these varied positions spoke to divisions within the American public concerning how we think about and respond to uncertainty competing expertise and securitization Kirk insightfully examines how experts in different fields offered conflicting assessments of the risks posed by Ebola and then goes on to analyze how the US press undermined the authority of the public health experts who accurately predicted that the virus posed little danger to Americans Reading the media coverage of the Ebola epidemic as a case study in the biopolitics of fear Kirk considers how the US response reflected not only anxieties over globalization but also long held narratives about the Dark Continent Finally Kirk shows how the US and global public response to the Ebola outbreak challenged traditional models of securitization and identifies patterns that have tragically recurred with subsequent epidemics such as COVID 19 and monkeypox

Gender, Law, and Religion During the COVID-19 Health Crisis

Montserrat Gas-Aixendri, Adelaide Madera, 2025-09-02 Looking at COVID 19 infection through a gendered lens reveals its deep impact on individuals in vulnerable positions especially women It raised new concerns about gender equity and inclusion particularly when gender intersects with other identity markers such as religious affiliation This intersection creates a double vulnerability heightening the risk of discrimination violence hate speech and harassment against women In various legal contexts women bear multiple roles and responsibilities The interaction between gender law religion and the pandemic has often resulted in disempowerment in shaping female identity This is evident both in Western countries where migrant women struggle for full integration and in their countries of origin where they often face the consequences of normative pluralism and insufficient state legal responses The pandemic has generated not only a health crisis but also exacerbated social and economic issues including increased gender based violence in family settings and growing inequalities in access to fundamental rights such as healthcare education employment and justice In this complex framework religious leaders face new challenges and must provide effective responses Female leadership within religious contexts can play a crucial role in advocating for new paradigms that address evolving social cultural and legal needs Religious actors are thus called upon to offer both guidance and support to vulnerable and marginalized members of their communities and to collaborate with governments in shaping a future where religious freedom gender equality gender justice and freedom from discrimination are upheld This volume aims to investigate the pandemic s impact on women within faith communities

examine emerging balances between female religious cultural claims and public welfare imperatives and develop gendered intersectional perspectives that promote women's full integration equality and participation in civil society

Emergencies and Public Health Crisis Management- Current Perspectives on Risks and Multiagency Collaboration Amir Khorram-Manesh, Frederick M Burkle, 2020-12-11 The successful management of emergencies and public health crises depends on adequate measures being implemented at all levels of the emergency chain of action from policy makers to the general population It starts with appropriate risk assessment prevention and mitigation and continues to prehospital and hospital care recovery and evaluation All levels of action require well thought out emergency management plans and routines based on established command and control identified safety issues functional communication well documented triage and treatment policies and available logistics All these characteristics are capabilities that should be developed and trained particularly when diverse agencies are involved In addition to institutional responses a robust community based disaster response system can effectively mitigate and respond to all emergencies A well balanced response is largely dependent on local resources and regional responding agencies that all too often train and operate within silos with an absence of interagency cooperation The importance of this book issue is its commitment to all parts of emergency and public health crisis management from a multiagency perspective It aims to discuss lessons learned and emerging risks introduce new ideas about flexible surge capacity and show the way it can practice multiagency collaboration

WHO guidance on research methods for health emergency and disaster risk management, 2021-09-30 Health Emergency and Disaster Risk Management Health EDRM has recently emerged as a critical field for research policy and practice as a result of the growing recognition of health as a core dimension in disaster risk management Global frameworks such as the WHO 13th General Programme of Work GPW13 the Sendai Framework for Disaster Risk Reduction 2015 2030 the Sustainable Development Goals SDGs and the International Health Regulations IHR have goals targets and indicators that monitor the health impact of disasters and emergencies and resilience in health systems and communities Policies and actions guided by the best possible evidence are therefore critical for managing the health risks of emergencies and disasters However the evidence base in Health EDRM is very limited reflecting the overall lack of research in this area To address this gap the WHO set out to develop a reference book about methods to guide Health EDRM research in collaboration with global experts This book provides concrete guidance across a wide range of research taking a systematic approach to discuss the type of research that is needed to generate relevant evidence for managing risks and consequences of emergencies and disasters This research includes observational and experimental studies and those that use qualitative or quantitative data or both When using the book readers are encouraged to take account of the specific setting of the health risks of any emergency or disaster including national capacities and the impacts that are directly and indirectly health related
