**The Legal Protection of Databases** Mark J. Davison, 2003-06-26 Mark Davison examines several legal models designed to protect databases considering in particular the EU Directive the history of its adoption and its transposition into national laws He compares the Directive with a range of American legislative proposals as well as the principles of misappropriation that underpin them In addition the book also contains a commentary on the appropriateness of the various models in the context of moves for an international agreement on the topic This book will be of interest to academics and practitioners including those involved with databases and other forms of new media **The Legal Protection of Databases** Simon Chalton, 2001 *"The" Legal Protection of Traditional Knowledge in the Pharmaceutical Field* Tobias Kiene, 2009

**Report on Legal Protection for Databases** Library of Congress. Copyright Office, 1997 This report gives an overview of the past and present domestic and international legal framework for database protection It describes database industry practices in securing protection against unauthorized use and Copyright Office registration practices relating to databases Finally it discusses issues raised and concerns expressed in a series of Copyright Office meetings to create a new federal intellectual property right in databases The report is divided into the following sections 1 Copyright Protection for Databases in the United States 2 Database Industry Practices 3 Copyright Office Registration Practices 4 The International Context 5 Prior Congressional Consideration 6 Copyright Office Meetings and 7 Issues including general needs for additional protection form of new protection definitions public interest users duration sole source data and constitutionality Appendices include

the Copyright Office Circular 65 European Database Directive Proposed WIPO Database Treaty Database Investment and Intellectual Property Antipiracy Act of 1996 H R 3531 and Copyright Office Database Meeting Participants AEF      **The Legal Protection of Databases in the European Union** ,1995      **A Comparison of the Legal Protection of Databases in the United States and EU** Mitchell Smith,2010 In this paper the laws governing the protection of databases in Europe and the United States are considered as they provide a useful comparison of different approaches to protection The potential implication of US and EU laws on bioinformatics is also explored as bioinformatics presents difficult issues centring on the commercial nature of the science In focussing on copyright protection in the US and the sui generis protection under the EU Directive it is argued that US copyright law currently provides an insufficient level of database protection While the tort of misappropriation exists in the US it is argued that it remains limited in use in protecting database owners due to the onerous cause of action requirements As such for protection to be sufficient under the US regime database owners are required to proactively seek protection for example through the creation of contracts and TPMs While these are not insufficient ways to protect databases it may be the case that these options promote the locking up of data and so are not optimal Conversely following the ECJ s clarification of the function of the sui generis right of database protection in the case of BHB v William Hill it is argued that the Directive may provide a more effective means of promoting the openness of information as opposed to a closed system where database owners are less likely to share data In considering the effects of the Directive on bioinformatics research it is however contended that the Directive requires further fair dealing exceptions for non commercial use It is to be noted that while these arguments remain pertinent to database protection beyond only scientific databases there is a particularly interesting question with respect to the effects of the law on science that is worth considering      **Report of Legal Protection for Databases** U.s. Copyright Office,2014-10-17 Databases have always been commodities of both commercial value and social utility ranging from their early incarnation in the eighteenth century as directories compiled by walking door to door to the late twentieth century compendiums of millions of items in electronic form The question of whether and how databases should be protected by the law has never been easy as it necessarily involves finding a balance between two potentially conflicting societal goals the goal of providing adequate incentives for their continued production and the goal of ensuring public access to the information they contain At different points in time and in different societies that balance has been struck in different ways In the past few years the issue has taken on new urgency due to changes in the legal technological and international landscape The major landmarks among these changes have been the U S Supreme Court s 1991 decision in Feist Publications v Rural Telephone Service Co rapid developments in the technologies for collecting organizing reproducing and disseminating information and the actions of the European Union in harmonizing the laws of its member states As a result 1996 saw the consideration of proposals for a new form of protection for databases both in the World Intellectual Property Organization and in the U S Congress The discussions sparked a heated

debate in the United States involving a broad spectrum of interests      *A Question of Balance* National Research Council, Division on Engineering and Physical Sciences, Commission on Physical Sciences, Mathematics, and Applications, Committee for a Study on Promoting Access to Scientific and Technical Data for the Public Interest, 1999-12-15

New legal approaches such as the European Union's 1996 Directive on the Legal Protection of Databases and other legal initiatives now being considered in the United States at the federal and state level are threatening to compromise public access to scientific and technical data available through computerized databases. Lawmakers are struggling to strike an appropriate balance between the rights of database rights holders who are concerned about possible commercial misappropriation of their products and public interest users of the data such as researchers, educators and libraries. *A Question of Balance* examines this balancing act. The committee concludes that because database rights holders already enjoy significant legal, technical and market based protections, the need for statutory protection has not been sufficiently substantiated. Nevertheless, although the committee opposes the creation of any strong new protective measures, it recognizes that some additional limits against wholesale misappropriation of databases may be necessary. In particular, a new properly scoped and focused U.S. statute might provide a reasonable alternative to the European Union's highly protectionistic database directive. Such legislation could then serve as a legal model for an international treaty in this area. The book recommends a number of guiding principles for such possible legislation as well as related policy actions for the administration.
