The Limits of Econometrics A. C. The Limits of Econometrics A. C. Advances in Econometrics Miroslav Verbič, 2011-07-27 Econometrics is becoming a highly developed and highly mathematicized array of its own sub disciplines as it should be as economies are becoming increasingly complex and scientific economic analyses require progressively thorough knowledge of solid quantitative methods This book thus provides recent insight on some key issues in econometric theory and applications The volume first focuses on three recent advances in econometric theory non parametric estimation instrument generating functions and seasonal volatility models Additionally three recent econometric applications are presented continuous time duration analysis panel data analysis dealing with endogeneity and selectivity biases and seemingly unrelated regression analysis Intended as an electronic edition providing immediate open access to its content the book is easy to follow and will be of interest to professionals involved in econometrics

Econometrics Luc Bauwens, Winfried Pohlmeier, David Veredas, 2007-12-31 In this paper we propose a new econometric approach to jointly model the time series dynamics of the trading process and the revisions of ask and bid prices We use this model to test the validity of certain symmetry assumptions very common among microstructure models Namely we test whether ask and bid quotes respond symmetrically to trade related shocks and whether buyer initiated trades and seller initiated trades are equally informative In essence the procedure we propose generalizes Hasbrouck's 1991 vector autoregressive model for signed trades and changes in the quote midpoint by relaxing the implicit symmetry assumptions in his model The properties of the empirical model are derived from a structural dynamic model for ask and bid prices In this model ask and bid prices share a common long run component the efficient price The long term value of the stock varies due to buyer initiated shocks seller initiated shocks and trade unrelated shocks The transitory components of ask and bid prices are characterized by two correlated and trade dependent stochastic processes whose dynamics are allowed to differ The trading process is endogenous Buyer and seller initiated trades are generated by two idiosyncratic but mutually dependent stochastic processes The generating processes of quotes and trades both depend on several exogenous variables that feature the trades and the market conditions Econometrics John Eatwell, Murray Milgate, Peter Newman, 1990 First published in the New Palgrave a dictionary of economics in four volumes 1987 T p verso Includes bibliographical references
