Sleep Evolution And Disorders:

Sleep Ida G. Karmanova, Genrikh A. Oganessian, 1999-05-20 Sleep Evolution and Disorders published for the first time in English follows the origin and evolution of the sleep waking cycle in vertebrates from a presented theoretical background influenced by Darwin's theory of evolution L. Orbeli's model of functional evolution and S. Davidenko's hypothesis of conditioned tropism The authors utilize the concept of dissolution of brain function first suggested by J. Jackson to consider disturbances in the wake sleep cycle in humans in terms of genetic brain pathologies including narcolepsy catalepsy epilepsy and Tourette's disease in terms of the origin and evolution of sleep in vertebrates They point out that sleep in certain pathological conditions of humans represents a passive defense behavior similar to such normal animal states as hibernation and hypnotic sleep phases using vast experimental data obtained on all classes of vertebrates The results obtained provide great insight into some sleep pathologies in humans for anyone working with or interested in sleep disorders **The**

Neurological Sciences and Pharmacology Christopher G Goetz, 2024 Traditionally studies and textbooks in Neurology or Psychiatry as well as allied disciplines deal with proximate causes of diseases and therapies but remain mute or minimally interested in their ultimate causes including the phylogeny and adaptive significance of disease manifestations Yet as clinicians or basic researchers we are conscious of potential evolutionary roots of neurological and psychiatric symptoms often offering a rudimentary explanation but never delving deeply into the current role of evolutionary science as it relates to health and disease We may miss appreciation of the role of adaptive properties evolutionarily based neuronal circuitries unbalanced cellular energy demands and the potential health consequences of residual syndromic behaviors that were possibly useful in early times of human development but presently are obsolete and pathological The problem is amplified because there is often no interdisciplinary dialogue between anthropology and evolutionary biology on one side and clinical sciences on the other side However the evolutionary tracing back of disease pathways may disclose unexpected insights and trigger the design of innovative research as well as propel the development of new therapeutic interventions There could also be a better apprehension of compensatory behaviors both at the cellular level as well as the systemic the behavioural levels that could be the expected fruits of such collaborations So far scientists fall short in modeling the complexity of human social life human language or manual dexterity and mental or emotional behaviors that typify human neurological or psychological function and dysfunction Finally there remain obstacles in the form of poor animal modeling for human brain diseases and for human longevity The present book aims to fill these gaps by presenting an evolutionary view of neurological and psychiatric conditions that is meant to complement and enrich existing medical perspectives *Sleep* Teofilo L. Lee-Chiong, 2005-12-23

Health and Disease According to Darwinian Evolution Shahriar Khan, 2015-02-01 We know much about the construction and functioning of the human body

but rarely ask how and why the human body came into existence The evolution of the human body and mind provides answers to longstanding and hard to answer questions on human health disease and treatment The Quantum theory gives the most fundamental explanation of the creation of atoms and molecules organic compounds DNA and its replication crossover during Meiosis etc Central is the theme that our bodies are made of the very product of primordial supernova explosions from billions of years ago Understanding the body may be the ultimate extension of quantum physics and evolution Man his fellow animals health germs and disease are a huge mystery novel and it is for us to solve with evolution how it all happened For thousands or millions of years man s DNA was programmed by natural selection from his life as a hunter gatherer or a farmer Our genetic makeup has been unable to keep pace with the rapid changes in diet lifestyle and environment over the last few decades Much of today s health disorders arise from the DNA s inability to cope with these rapid changes The internal environment of the body contains at least hundreds of chemicals organic and inorganic detectable and undetectable known and unknown We can never hope to know all the chemicals and their reactions A new concept is introduced about our hidden arms race with farm animals This book is based on an understanding of evolution of human life and life in general on the planet It has a common sense approach to immunity and the ability of the body to heal itself The approaches are not dramatic new discoveries but an extension of well established principles of anthropology and evolution The language does not require specialized knowledge and may be read by anyone with an interest in health and disease
