Adewumi,Andrei Polejack,Joanna Vince,Maree E. Fudge,2023-12-05 In the last decade the concept of a Blue Economy has ignited a deep theoretical debate Ranging from the integration of the triple bottom line of sustainability to the optimization of profit from ocean exploitation the meaning of the term blue economy differs considerably between epistemic communities and even more so among national and regional policies There is a general sense of the opportunity to realise enhanced social and economic benefits from the sustainable utilisation of their ocean and coastal

resources under the umbrella framework of blue economy Blue economy is gaining traction already as a significant component of national policies even in spite of a clear conceptualization of the term Many countries are now preparing national policies towards realising their blue economy ambitions utilizing the concept as they see fit Likewise multilateral and regional organisations are developing guidelines and providing investment in new research technologies and financing tools that promote blue economy Critical challenges abound in particular in less privileged countries These include the gap in research capabilities governments prioritizing social wellbeing and economic profit in contrast to environmental protection the identification of new and emerging areas of ocean economic activity that are both socially and ecologically sustainable and holds viable business models that can attract private investment

**Artificial Intelligence and Edge Computing for Sustainable Ocean Health** Debashis De, Diganta Sengupta, Tien Anh Tran, 2024-09-11 Artificial

Intelligence and Edge Computing for Sustainable Ocean Health explores the transformative role of AI and edge computing in preserving and enhancing ocean health. The growing influence of Artificial Intelligence (AI) along with the Internet of Things (IoT) in generating wide coverage of sensor networks and Edge Computing (EC) has paved the way for investigation of underwater as well as massive marine data, thereby generating huge potential for credible research opportunities for these domains. This book's journey begins with a broad overview of Artificial Intelligence for Sustainable Ocean Health, setting the foundation for understanding AI's potential in marine conservation. The subsequent chapter, Role of Artificial Intelligence and Technologies in Improving Ocean Health in Promoting Tourism, illustrates the synergy between technological advancements and sustainable tourism practices, demonstrating how AI can enhance the attractiveness and preservation of marine destinations. The identification, restoration, and monitoring of marine resources along with the utilization of technology continues in Utilization of Underwater Wireless Sensor Network through Supervising a Random Network Environment in the Ocean Environment, which has been extensively dealt with. The technical challenges of underwater imaging essential for accurate data collection and analysis have been discussed. The importance of Explainable AI is discussed in chapters like Sustainable Development Goal 14: Explainable AI (XAI) for Ocean Health, Explainable AI (XAI) for Ocean Health: Exploring the Role of Explainable AI in Enhancing Ocean Health, and A Comprehensive Study of AI (XAI) for Ocean Health Monitoring, which emphasize transparency and trust in AI systems. Further, Revolutionizing Internet of Underwater Things with Federated Learning, Underwater Drone, Underwater Imagery with AI, ML, and IoT in ROV Technology, and Ocean Cleanup have been demonstrated using innovative approaches to addressing underwater challenges. The book also includes a Review on the Optics and Photonics in Environmental Sustainability, focusing on the role of optics in marine conservation. Security issues are tackled in Intelligent Hash Function Based Key Exchange Scheme for Ocean Underwater Data Transmission, and the overarching potential of AI in marine resource management is discussed in Artificial Intelligence as Key enabler for Safeguarding the Marine Resources.
