improving larger body patterns and tensions Logically the responsiveness and self corrective capacity of body tissues when given proper conditions is also an important factor The primary techniques used are the osteopathic methods of strain counterstrain cranial and visceral osteopathy and fascial release as well as body mind centering zero balancing and acupuncture His clinical model which represents a new approach to serious chronic tendon and ligament injuries is based on these techniques their combinations and specific usage and the skills and aptitudes necessary for applying these techniques including certain perceptual skills and a thorough knowledge of anatomy and kinesiology Weintraub s descriptions are vital interesting alive absorbing even dramatic He discusses at great length the nature of the tendons and ligaments describes his manual therapy model comparing it with conventional medical procedures and covers processes and tissue changes in tendon ligament healing as related to manual therapy Case studies self help strategies and thoughtful words on clinical efficacy and future directions in the field make for a thorough and well rounded presentation Product Description Sports Injuries Lars Peterson, Per A.F.H.
