Ternary Alloys Vol 4 AlCdCeAlCu:

Ternary Alloys Günter Petzow, Günter Effenberg, 1996-12-14 Phase diagrams provide scientists and engineers with basic information of fundamental importance both for scientific research and for the development and optimization of materials. Collections of such diagrams are accordingly extremely useful especially when the data on which they are based have been subjected to critical evaluation. The series Ternary Alloys provides concise and as far as published data allow consistent phase diagram descriptions of complete categories of ternary systems e.g. Ag X Y or Al X Y. The representation of the equilibria of ternary systems in dependence of temperature results in spatial diagrams whose sections and projections are generally published in the literature. In Ternary Alloys phase equilibria are described in terms of liquidus projections, isothermal sections and in cases where the tie lines lie in the sectional plane in terms of vertical sections, pseudobinaries. Data on invariant equilibria are generally given in the form of tables. **Ternary Alloys, Ternary Alloys Volume 4:**

Al-Cd-Ce to Al-Dy-Zr Günter Petzow, Günter Effenberg, 1991-06-12 The complete set of the series Ternary Alloys 40 volumes in total will present all ternary systems which ever have had the attention of experimentalists. The systems are arranged in alphabetical order and have a standard format allowing easy access to the required data. The following information is provided: liquidus projections, isothermal and vertical sections, reaction schemes, invariant equilibria and crystallographic data accompanied by short descriptive texts and extensive references. All data and diagrams selected for inclusion have been critically examined and reviewed by the world's most competent panel of experts under the authority of the Max Planck Institute for Metals Research in Stuttgart. The compendium is the most comprehensive source of reliable data on ternary systems available worldwide. It will prove indispensable to everyone concerned with the research and development of materials such as materials scientists and engineers, metallurgists, chemical engineers, inorganic chemists and physicists.
