The Mammalian Mitochondrial Respiratory Chain Molecular Biology:

The Mammalian Mitochondrial Respiratory chain Walter Wainio, 2012-12-02 The Mammalian Mitochondrial Respiratory Chain provides the vocabulary related to the mitochondrial respiratory chain in mammalian species. It explores the heterogeneous nature of mitochondria, the mammalian mitochondrial cytochromes, the concept of a respiratory chain for the oxidation of substrates, the cytochrome and non cytochrome components of the chain, and the role of the respiratory chain in energy conservation. Organized into five chapters, this volume begins with an overview of the structure and composition of mitochondria in heart, liver, kidney, and brain, before turning to the NADH oxidase system and its ability to generate one additional high energy bond for every pair of electrons transferred compared to the succinate oxidase system. It also describes electron transfer in the respiratory chain and inhibitors of the respiratory chain such as antimycin A, along with differences in the pathways of electrons from succinate, choline, and NADH to oxygen, as well as systems mediated by electron transferring flavoprotein. The reader is also introduced to the processes involved in the fragmentation, extraction, and recombination of mitochondria, artificial electron acceptors such as phenazine methosulfate, and artificial electron donors such as ascorbate and tetramethyl p phenylenediamine, and the role of flavoproteins including flavin mononucleotide and flavin adenine dinucleotide in electron transport. The book concludes with a chapter that explains how the oxidation reductions of the respiratory chain release energy in discrete packets. Graduate students and beginning researchers in biology will find this book extremely helpful.

Structure and Function of Biological Membranes Lawrence I. Rothfield, 2014-06-28 Structure and Function of Biological Membranes explains the membrane phenomena at the molecular level through the use of biochemical and biophysical approaches. The book is an in depth study of the structure and function of membranes. It is divided into three main parts. The first part provides an overview

of the study of the biological membrane at the molecular level Part II focuses on the detailed description of the overall molecular organization of membranes The third part covers the relationship of the molecular organization of membranes to specific membrane functions discusses catalytic membrane proteins presents the role of membranes in important cellular functions and looks at the membrane systems in eukaryotic cells Biochemists cell physiologists biologists researchers and graduate and postdoctoral students in the field of biology will find the text a good reference material *Calcium and Cell Function* Wai Yiu Cheung, 2013-10-22 Calcium and Cell Function Volume I Calmodulin covers calmodulin regulated functions The book discusses the preparation properties structure function evolution and structure function relationships of calmodulin and calmodulin dependent adenylate cyclase The text also describes the transport of calmodulin and plasma membrane calcium the role of calmodulin and troponin in the regulation of phosphorylase kinase from mammalian skeletal muscle and calcium dependent protein phosphorylation in mammalian brain and other tissues The role of calmodulin in dopaminergic transmission the immunocytochemical localization of calmodulin in rat tissues and the immunocytochemical studies of the localization of calmodulin and caM BP80 in the brain are also considered The book further tackles the mechanisms and pharmacological implications of altering calmodulin activity Molecular cardiologists biochemists and pharmacologists will find the book invaluable Biochemical Applications of Raman and Resonance Raman Spectroscopies P Carey, 2012-12-02 Biochemical Applications of Raman and Resonance Raman Spectroscopies focuses on the application of Raman and resonance Raman spectroscopies to biochemical problems The book reviews biological systems and details the application of Raman spectroscopy to biological molecules such as proteins nucleic acids and lipids It also looks at codevelopments of lasers optics and electronics that drive advances in experimental Raman spectroscopy along with the important ramifications of these advances for biochemical applications This volume is organized into eight chapters and begins with an overview of the theoretical and experimental aspects of Raman spectroscopy including a very brief explanation of what Raman and resonance Raman spectroscopies are and a discussion of their advantages and disadvantages for biochemical studies The explanation of the Raman and resonance Raman effects is taken up in more detail in the next chapter which develops the concept of the vibrational motions of molecules by initially considering mechanical ball and spring models and goes on to use this concept to formulate a classical model for Raman scattering The resonance Raman effect is then described by another model which emphasizes the discrete or quantized energy levels available to a molecule The reader is also introduced to the experimental aspects of Raman spectroscopy and the application of Raman spectroscopy across the entire field of biochemistry Each chapter contains an outline of the basic chemistry and biochemical nomenclature involved This book will be of interest to chemists biochemists and spectroscopists as well as graduate students and experienced research workers

Physical Principles and Techniques of Protein Chemistry Part B Sydney Leach, 2012-12-02 Physical Principles and Techniques of Protein Chemistry Part B deals with the theories and application of selected physical methods in protein

chemistry evaluation This book is divided into seven chapters that cover the ultracentrifugal analysis light scattering infrared IR methods nuclear magnetic resonance NMR spectroscopy and differential thermal analysis of protein properties This text first describes the fundamental ideas and methodology of sedimentation analysis of ideal noninteracting solutes and the problems of nonideality and solute solute interaction This book then deals with the problems involved in the interpretation of viscometric data for evaluation of intrinsic viscosity of proteins The following chapters examine the principles measurement and analysis of spectra and experimental techniques of light scattering IR and NMR spectroscopic methods Discussions on coordination phenomena identification of binding sites and ion binding in the crystalline state and in protein solutions are included The concluding chapter presents some examples of protein analysis using differential thermal analysis technique This book is of great value to chemists biologists and researchers who have great appreciation of protein chemistry

Plant Respiration: Metabolic Fluxes and Carbon Balance Guillaume Tcherkez,Jaleh Ghashghaie,2018-02-20 There are currently intense efforts devoted to understand plant respiration from genes to ecosystems and its regulatory mechanisms this is because respiratory CO₂ production represents a substantial carbon loss in crops and in natural ecosystems Thus in addition to manipulating photosynthesis to increase plant biomass production minimization

of respiratory loss should be considered in plant science and engineering. However, respiratory metabolic pathways are at the heart of energy and carbon skeleton production and therefore it is an essential component of carbon metabolism sustaining key processes such as photosynthesis. The overall goal of this book is to provide an insight in such interactions as well as an up to date view on respiratory metabolism taking advantage of recent advances and concepts from fluxomics to natural isotopic signal of plant CO₂ efflux. It is thus a nonoverlapping complement to Volume 18 in this series *Plant Respiration From Cell to Ecosystem* which mostly deals with mitochondrial electron fluxes and plant scale respiratory losses. Biopolymers Alen Walton, 2012-12-02. *Biopolymers* deals with the methods of physical characterization and the principles underlying them with emphasis on quantitative aspects of sequence conformation and structure in both laboratory synthesized and native biopolymers. The book reviews structural units of biopolymers and describes characterization of biopolymers, the available techniques, the evaluation of underlying principles and experimental applications. Some of these methods include Raman spectroscopy, theoretical conformation analysis, electron microscopy and morphology of laboratory synthesized polymers. The text explains the factors controlling conformation of polypeptides, the steric maps of dipeptides, potential energy maps and the calculation of tertiary polypeptide structure. The investigator can use X ray diffraction to determine the structure of polymers and macromolecules such as diffraction by a crystal, by poorly crystalline polymer systems or by a helical chain. The book notes that materials that can be crystallized from strong solvents reveal morphology similar to that of commercial polymers which are different from that of polypeptides or proteins in native tissue. The text explains the basis of infrared and Raman spectroscopy in probing molecular structure and conformation of biological macromolecules. The investigator can also employ nuclear magnetic resonance and dielectric relaxation for conformation in physical organic chemistry outside of biological macromolecule applications. The book can prove helpful for researchers in ultra trace analysis, polymer research and analytical chemistry.
