The Cigarette Century Allan M. Brandt, 2009-01-06 The invention of mass marketing led to cigarettes being emblazoned in advertising and film deeply tied to modern notions of glamour and sex appeal It is hard to find a photo of Humphrey Bogart or Lauren Bacall without a cigarette No product has been so heavily promoted or has become so deeply entrenched in American consciousness And no product has received such sustained scientific scrutiny The development of new medical knowledge demonstrating the dire harms of smoking ultimately shaped the evolution of evidence based medicine In response the tobacco industry engineered a campaign of scientific disinformation seeking to delay disrupt and suppress these studies Using a massive archive of previously secret documents historian Allan Brandt shows how the industry pioneered these campaigns particularly using special interest lobbying and largesse to elude regulation But even as the cultural dominance of the cigarette has waned and consumption has fallen dramatically in the U S Big Tobacco remains securely positioned to expand into new global markets The implications for the future are vast 100 million people died of smoking related diseases in the 20th century in the next 100 years we expect 1 billion deaths worldwide

Globalizing Tobacco Control Roddey Reid, 2005-12-20 Reid develops an approach to globalization and health that goes beyond simplistic dichotomies such as the puritanism of the United States in contrast with the more libertine cultures of other countries and he also eschews the equally simplistic view that the world is becoming homogenized David J Hess Rensselaer Polytechnic Institute A tangible aspect of living working and traveling in the 21st century is the experience of moving between smoke filled and smoke free environments In *Globalizing Tobacco Control* Roddey Reid examines what

lies behind this experience the revolution in public attitudes and health codes that regulate daily routines and the life of the body While the gradual replacement of smoking with non smoking as the social norm is a global phenomenon it has not followed the same trajectory everywhere Reid compares anti smoking campaigns in the United States France and Japan for what they reveal about the nature of globalization and liberal arts of government He explores distinctive national histories of tobacco evolving global marketing strategies of transnational tobacco corporations social marketing techniques used to tailor public health messages to particular ethnic communities and the programs of international public health organizations

**Challenges of Governing the Environment and Climate Change** Gary Wickham, Jo-Ann Goodie, 2013-11-26 The environment has not always been protected by law It was not until the middle of the 20th century that the environment came to be understood as an entity in need of special care and the law politics duo firmly fixed its focus on this issue In this book Wickham and Goodie tell the story of how law and politics first came upon the environment as an object in need of special attention They outline the unlikely intersection of aesthetics and science that made the environment into the matter of great concern it is today The book describes the way private common law strategies and public law legislative strategies have approached the task of protecting the environment and explore the greatest environmental challenge to have so far confronted environmental law and politics the threat of global climate change The book offers descriptions of many of the strategies being deployed to meet this challenge and present some troubling assessments of them The book will be of great interest to students teachers and researchers of environmental law socio legal studies environmental studies and political theory **Psychology of Learning and Motivation**, 2009-02-09 This volume presents a variety of perspectives from within

and outside moral psychology Recently there has been an explosion of research in moral psychology but it is one of the subfields most in need of bridge building both within and across areas Interests in moral phenomena have spawned several separate lines of research that appear to address similar concerns from a variety of perspectives The contributions to this volume examine key theoretical and empirical issues these perspectives share that connect these issues with the broader base of theory and research in social and cognitive psychology The first two chapters discuss the role of mental

representation in moral judgment and reasoning Sloman Fernbach and Ewing argue that causal models are the canonical representational medium underlying moral reasoning and Mikhail offers an account that makes use of linguistic structures and implicates legal concepts Bilz and Nadler follow with a discussion of the ways in which laws which are typically construed in terms of affecting behavior exert an influence on moral attitudes cognition and emotions Baron and Ritov follow with a discussion of how people's moral cognition is often driven by law like rules that forbid actions and suggest that value driven judgment is relatively less concerned by the consequences of those actions than some normative standards would prescribe Iliev et al argue that moral cognition makes use of both rules and consequences and review a number of laboratory studies that suggest that values influence what captures our attention and that attention is a powerful determinant of judgment and preference Ginges follows with a discussion of how these value related processes influence cognition and behavior outside the laboratory in high stakes real world conflicts Two subsequent chapters discuss further building blocks of moral cognition Lapsley and Narvaez discuss the development of moral characters in children and Reyna and Casillas offer a memory based account of moral reasoning backed up by developmental evidence Their theoretical framework is also very relevant to the phenomena discussed in the Sloman et al Baron and Ritov and Iliev et al chapters The final three chapters are centrally focused on the interplay of hot and cold cognition They examine the relationship between recent empirical findings in moral psychology and accounts that rely on concepts and distinctions borrowed from normative ethics and decision theory Connolly and Hardman focus on bridge building between contemporary discussions in the judgment and decision making and moral judgment literatures offering several useful methodological and theoretical critiques Ditto Pizarro and Tannenbaum argue that some forms of moral judgment that appear objective and absolute on the surface are at bottom more about motivated reasoning in service of some desired conclusion Finally Bauman and Skitka argue that moral relevance is in the eye of the perceiver and emphasize an empirical approach to identifying whether people perceive a given judgment as moral or non moral They describe a number of behavioral implications of people's reported perception that a judgment or choice is a moral one and in doing so they suggest that the way in which researchers carve out the moral domain a priori might be dubious
