## **Small Astronomical Observatories Amateur And Professional Designs And Constructions:**

**Small Astronomical Observatories** Patrick Moore, 2012-12-06 In *Small Astronomical Observatories* Patrick Moore has collected descriptions of amateur and small professional observatories currently in use in Europe and America showing how many astronomers have built their own observatory often with effective and sometimes extraordinary improvisations to reduce the cost. There is a photograph of each along with details of its construction and a foreword written by Patrick Moore. In addition to providing a fascinating study for its own sake, *Small Astronomical Observatories* offers a unique fund of ideas and practical details for anyone who wants to build an amateur or small professional observatory. *Eyes on the Universe* Patrick Moore, 2012-12-06 *Eyes on the Universe* is an illustrated history of the telescope beginning with pre-telescopic observatories and the refractors of Galileo, Lippershey and Digges and ending with the most modern instruments including of course the Hubble Space Telescope. Written by Dr Patrick Moore CBE to celebrate the 40th Anniversary of the world's longest running television programme the BBC's *The Sky at Night* the book takes an enthusiastic look at the development of astronomical telescopes. It provides its readers with a fascinating overview of the way astronomical telescopes have evolved with technology during the past 450 years. Amateur and professional astronomers alike will find this book both entertaining and instructive.

**From Casual Stargazer to Amateur Astronomer** Dave Eagle, 2013-10-16 The beginning astronomical observer passes through a series of stages. The initial stage is hugely exciting and gives the beginner a real buzz as he discovers some of the faint, fuzzy objects, markings on the planets, rings around Saturn and the craters on the Moon. But as the novice observer progresses he or she wants to know what more there is than looking at faint, fuzzy blobs or indistinct planet markings. Many jump to the conclusion wrongly that they need to spend lots of money on expensive equipment to progress. *From Casual Stargazer to Amateur Astronomer* has been written specifically to address this group of budding stargazers. Astronomy is much more than a quick sightseeing tour. Patient observers who can develop their skills will start to appreciate what they are seeing and will know exactly what to look out for on any particular night. And equally important they will learn what not to expect to see. *From Casual Stargazer to Amateur Astronomer* is for those who want to develop observing skills beyond mere sightseeing and learn some of the techniques used to carry out enjoyable and scientifically useful observations. It will also direct readers to make informed choices about what can be seen and when. This book is for anyone keen to develop their skills as an amateur astronomer. *Southern Stars*, 2003 [American Book Publishing Record](#), 1996-09

*The Study of Variable Stars Using Small Telescopes* Royal Astronomical Society of Canada, 1986-12-18 The techniques of visual photographic and photoelectric measurement of variable stars are accompanied by specific examples of the type of scientific results that can be and have been obtained. *International Books in Print*, 1990 **The Irish Astronomical Journal**, 1998 [Books In Print 2004-2005](#) Ed Bowker, Staff, Staff Bowker, Ed, 2004 **Setting-Up a Small Observatory:**

**From Concept to Construction** David Arditti, 2007-12-20 Arditti's approachable work covers all the details of design.

siting and construction once a basic type has been decided upon It is written in a way that is equally applicable to the USA and UK where there are slightly different building regulations and deals with matters that are basic to building and commissioning any amateur observatory Uniquely David Arditti also considers the aesthetics of amateur observatories fitting them in with family and neighbors and maybe disguising them as more common garden buildings if necessary Every amateur astronomer who wants a purpose built observatory and let s face it which one of them doesn t will find this book invaluable
