The Health of Lesbian, Gay, Bisexual, and Transgender People Institute of Medicine,Board on the Health of Select Populations,Committee on Lesbian, Gay, Bisexual, and Transgender Health Issues and Research Gaps and Opportunities,2011-07-24 At a time when lesbian gay bisexual and transgender individuals often referred to under the umbrella acronym LGBT are becoming more visible in society and more socially acknowledged clinicians and researchers are faced with incomplete information about their health status While LGBT populations often are combined as a single entity for research and advocacy purposes each is a distinct population group with its own specific health needs Furthermore the experiences of LGBT individuals are not uniform and are shaped by factors of race ethnicity socioeconomic status geographical location and age any of which can have an effect on health related concerns and needs The Health of Lesbian Gay Bisexual and Transgender People assesses the state of science on the health status of LGBT populations identifies research gaps and opportunities and outlines a research agenda for the National Institute of Health The report examines the health status of these populations in three life stages childhood and adolescence early middle adulthood and later adulthood At each life stage the committee studied mental health physical health risks and protective factors health services and contextual influences To advance understanding of the health needs of all LGBT individuals the report finds that researchers need more data about the demographics of these populations improved methods for collecting and analyzing data and an increased participation of sexual and gender minorities in research The Health of Lesbian Gay Bisexual and Transgender People is a valuable resource for policymakers federal agencies including the National Institute of Health NIH LGBT advocacy groups clinicians and service providers The Politics of Problem Definition David A. Rochefort,Roger W. Cobb,1994 At the nexus of politics and policy development lies persistent conflict over where problems come from what they signify and based on the answers to those questions what kinds of solutions should be sought Policy researchers call this

process problem definition Written for both scholars and students this book explains how and why social issues come to be defined in different ways how these definitions are expressed in the world of politics and what consequences these definitions have for government action and agenda setting dynamics The authors demonstrate in two theoretical chapters and seven provocative case studies how problem definition affects policymaking for high profile social issues like AIDS drugs and sexual harassment as well as for problems like traffic congestion plant closings agricultural tax benefits and air transportation By examining the way social problems are framed for political discussion the authors illuminate the unique impact of beliefs values ideas and language on the public policymaking process and its outcomes In so doing they establish a common vocabulary for the study of problem definition review and critique the insights of existing work on the topic and identify directions for future research

capacity which has been substantially debilitated in the wake of the Covid 19 pandemic STIs can have serious consequences for sexual reproductive and overall health Untreated syphilis for instance is directly implicated in neurological cardiovascular and dermatological disease Human papillomavirus is a known cause of cervical cancer and is the most common cancer among women globally Hepatitis B increases risk for cirrhosis and primary liver cancer Despite reductions in HIV transmission and improvements in prevention and treatment infections among women girls adolescents and mother to child transmission remain unacceptably high Marginalized racial ethnic minorities LGBTQ persons vulnerable at risk adolescents and young adults and other underrepresented populations are more susceptible to STIs as they negotiate an array of factors that can delay and even preclude access to preventive interventions The United States spends substantially more on STI prevention and treatment yet it consistently bears a disproportionate burden of sexually transmitted infections compared to other Western industrialized nations Access to healthcare erosion and diversion of public health capacity racism discrimination stigma substandard education and poverty have all been identified as important contributors to the trajectory of acute sexually transmitted infections Furthermore upstream drivers such as national state and local public health policies have been associated with population level STI risk prevention and treatment and as such offer opportunities for ecological observational and multi level analyses to assess their direct and indirect impact on sexual health outcomes In this thematic collection we aim to present an interdisciplinary collection of high quality articles centered on the premise that the rise of emerging and re emerging STIs can be attributed in part to a complex interaction of sociomedical factors beyond individual behavioral risk profiles This Research Topic welcomes a variety of manuscript formats including original research brief reports systematic reviews and perspective manuscripts involving sociomedical factors social determinants of health health disparities infectious disease epidemiology and other drivers including health policies that act as barriers and facilitators of effective STI prevention and treatment Manuscripts that examine structural community institutional interpersonal and broad individual factors linked to STIs are very well suited for this collection Topic areas include but are not limited to Structural racism discrimination and stigma and their influence on prevention treatment and support services among vulnerable and marginalized populations Housing and income insecurity that impede sexual reproductive and overall health Biological factors that affect the spread of STIs including their asymptomatic nature and the influence of sex as a biological variable Intimate partner violence harassment and intimidation Substance abuse sex work sexual networks and normative sexual attitudes and beliefs that impede the adoption of preventive health promoting behaviors Priority populations including adolescents men who have sex with men youth who are LGBTQ and the incarcerated Impact of HIV pre exposure prophylaxis PrEP uptake on STI incidence Culturally specific biopsychosocial behavioral and community based STI interventions to treat and support those afflicted with STIs Community mobilization and community based organization to reduce STIs Community level prevalence of infectious agents Local and holistically integrated STI clinics Public health STI workforce capacity Health
