Friendship and Social Interaction Valerian J. Derlega, Barbara A. Winstead, 2012-12-06 A neglected topic in the field of personal relationships has been the study of friendships Social psychologists have studied how and why individuals are attracted to one another and the processes of interaction during initial encounters but they have not paid much attention to ongoing friendships A major goal of the present volume is to develop theories and integrate research on the development and maintenance of friendships

Another major goal is to build bridges between social psychologists and other social scientists by presenting an interdisciplinary approach. Although a majority of the contributors are social psychologists, other authors include sociologists as well as developmental, personality, and clinical psychologists. The chapters also present research on friendship based on a wide range of research methodologies including laboratory research as well as longitudinal, naturalistic, and clinical studies. Hence, the book incorporates a variety of conceptual and methodological approaches that should contribute to a cross-fertilization of ideas among disciplines. The first chapter by Barbara A. Winstead and Valerian J. Derlega provides an overview of theory and research on friendship. The second chapter by Daniel Perlman and Beverley Fehr provides a summary and conceptual critique of social psychological theories of social attraction that are relevant to the study of friendship. Adopting a developmental approach, Duane Buhrmester and Wyndol Furman in Chapter 3 demonstrate the particular importance of friendship during middle childhood and adolescence in fulfilling interpersonal needs.

Personal Relationships and Personal Networks Malcolm R. Parks, 2017-09-25. The effort to understand personal relationships has traditionally focused on the individual characteristics of participants. *Personal Relationships and Personal Networks* takes this analysis a step further, focusing on research linking participants' feelings and actions within a given personal relationship to the larger social context surrounding it. Author Malcolm R. Parks expands on the idea that the initiation, development, maintenance, and dissolution of relationships are inextricably connected to each participant's social network, a perspective that allows for a better appreciation of our connection to the world and a greater understanding of our significant power as social actors. This book offers a new way to consider basic notions about how relationships form, such as how particular people meet and how relationships are started. Among many findings, the volume demonstrates that individuals in relationships feel closer and generally more connected when they also have a greater amount of contact with the members of each other's personal networks and when they believe that network members support their relationship. Additional topics discussed include how this social context model is applicable to different types of relationships, how participants interact with network members, how social networks are involved in the deterioration of personal relationships, and what drives change in relationships. Students, researchers, and professionals in a wide variety of disciplines such as communication, psychology, sociology, anthropology, family studies, clinical psychology, public health, nursing, education, and social work will find this book useful, as will anyone seeking to better understand their own personal relationships.
