Socioecology and Psychology of Primates Russell H. Tuttle, 2011-06-03 No detailed description available for Socioecology and Psychology of Primates *Socioecology and Psychology of Primates*, 1975 **Socioecology and Psychology of Primates**, 1975 *The Natural History of Primates* Robert W. Sussman, Donna Hart, Ian C. Colquhoun, 2022-10-20 The interest in primates from lemurs to gorillas has never been greater Primatologists are continually finding evidence in the behavior and ecology of our closest genetic relatives that sheds light on human origins So just who are these 520 species of complex and intelligent mammals inhabiting the Neotropics Africa Madagascar and Asia The Natural History of Primates provides the most current information on wild primates from experts who have studied them in their natural environments This volume provides up to date facts and figures on how groups of social primates interact with each other and the plants and other animal species in their ecosystems what they eat which predators might eat them how males and females seek mates how infants are raised and myriad other fascinating details about their visual and vocal communication their ability to craft and use tools and the varieties of locomotion they employ As human populations continue to expand into the rainforests savannas and woodlands where nonhuman primates dwell the preservation of these species becomes ever more important The Natural History of Primates is unique in its emphasis on the conservation status of primate species and its ample discussions of how humans and nonhuman primates can coexist in the twenty first century **Primate Behaviour and Social Ecology** Hilary O. Box, 2012-12-06 One of the most obvious changes that has occurred in behavioural biology in recent years is that it has become conspicuously a problem orientated subject Moreover one of the most important consequences of this has been to stimulate interdisciplinary links between evolutionary biology zoology ecology anthropology and psychology The time is now right to ask questions which relate whole animals in the contexts of their ecosystems with their social behaviour and development with their perceptual and cognitive capacities These are new ways of looking at old problems but we are still at the stage of finding out what kinds of questions to ask For several years now I have been involved in teaching behavioural biology to students of psychology as well as zoology and have greatly appreciated the opportunity to relate material across many different subject areas It is the interfacing of problems as in ecology and psychology for example that makes more sense of topics such as intelligence responses to novelty feeding strategies and social learning The aim of the book is to provide readily digestible information in a number of areas of current interest in behavioural biology Above all it is intended to provide a basis for discussion and further inquiry **Adaptive Radiations of Neotropical Primates** Marilyn A. Norconk, Alfred L. Rosenberger, Paul A. Garber, 2011-06-28 This collection of 29 papers grew out of a symposium entitled Setting the Future Agenda for Neotropical Primates The symposium was held at the Department of Zoological Research National Zoological Park Washington D C on February 26 27 1994 and was sponsored by the Wenner Gren Foundation for Anthropological Research Smithsonian Institution and Friends of the National Zoo We put

the symposium together with two objectives to honor Warren G Kinzey for his contributions to the growing field of platyrrhine studies and to provide researchers who work in the Neotropics with the opportunity to discuss recent developments to identify areas of research that require additional study and especially to help guide the next generation of researchers. The symposium provided the opportunity to recognize Warren as a mentor and collaborator to the contribution of the study of platyrrhines. Contributions to the book were expanded in order to provide a more comprehensive view of platyrrhine evolution and ecology to emphasize the interdisciplinary nature of many of these studies and to highlight the central role that New World monkeys play in advancing primatology. If this volume were to require major revisions after just one more decade of research that would be a fitting testament to Warren's enthusiasm and his drive to continually update the field with new ideas and methods. Tributes to Warren and a list of his publications have been published elsewhere.

Norconk 1994 1996 Rosenberger 1994 1995 Developments in Primate Gesture Research Simone Pika, Katja Liebal, 2012

The book is a themed mutually referenced collection of articles from a very high powered set of authors based on the workshop on Current developments in non human primate gesture research which was held in July 2010 at the European University Viadrina Frankfurt Oder Germany. The motivation for this book following on from the motivation for the workshop series was to present the state of the art in non human primate gesture research with a special emphasis on its history interdisciplinary perspectives developments and future directions. This book provides for the first time in a single volume the most recent work on comparative gestural signaling by many of the major scholars in the field such as W D Hopkins D Leavens T Racine J van Hooff and S Wilcox in alphabetical order **Walker's Primates of the World** Ronald M. Nowak, 1999-10-28

Recently extinct genera such as the giant lemurs of Madagascar are covered in full. Text summaries present well documented descriptions of the physical characteristics and living habits of primates in every part of the world.

BOOK JACKET **Primates of Western Uganda** Nicholas E. Newton-Fisher, Hugh Notman, James Durward Paterson, Vernon Reynolds, 2007-02-05

This volume covers aspects of ecology behavior genetics taxonomy cultural patterns hunting by non human primates physiology dietary chemistry and ecotourism in several major clades of primates from galagos and pottos through cercopithecoids to hominoids **Primate Communication** Katja Liebal, Bridget M. Waller, Katie E. Slocombe, Anne M. Burrows, 2014

Multimodal approach to primate communication with focus on its cognitive foundations and how this relates to theories of language evolution Primate Ecology and Conservation: Volume 2 International Primatological Society. Congress, 1986-08-21

The survival of primates in their natural habitats is of growing concern to primatologists ecologists and conservationists. In this volume research on feeding behaviour nutrition and digestive physiology from captive and wild primates is presented. Correlates of the habitat and social organisation are discussed and then integrated with the pressing problem of how to conserve primates. Broad issues of confrontation between human and non human primate populations are considered in the light of conflicting priorities for land use and development. The

increased knowledge of what primates require for their survival is applied to problems of captive propagation as a means of reducing dependence on exploiting wild populations The papers presented in this volume will stimulate discussion between ecologists conservationists and those concerned with land use management to establish realistic policies for primate conservation

Reconstructing Behavior in the Primate Fossil Record J. Michael Plavcan, Richard F. Kay, William L. Jungers, Carel P. van Schaik, 2012-12-06 This volume brings together a series of papers that address the topic of reconstructing behavior in the primate fossil record The literature devoted to reconstructing behavior in extinct species is overwhelming and very diverse Sometimes it seems as though behavioral reconstruction is done as an afterthought in the discussion section of papers relegated to the status of informed speculation But recent years have seen an explosion in studies of adaptation functional anatomy comparative sociobiology and development Powerful new comparative methods are now available on the internet At the same time we face a rapidly growing fossil record that offers more and more information on the morphology and paleoenvironments of extinct species Consequently inferences of behavior in extinct species have become better grounded in comparative studies of living species and are becoming increasingly rigorous We offer here a series of papers that review broad issues related to reconstructing various aspects of behavior from very different types of evidence We hope that in so doing the reader will gain a perspective on the various types of evidence that can be brought to bear on reconstructing behavior the strengths and weaknesses of different approaches and perhaps new approaches to the topic We define behavior as broadly as we can including life history traits locomotion diet and social behavior giving the authors considerable freedom in choosing what exactly they wish to explore

Primate Communities J. G. Fleagle, Charles Janson, Kaye Reed, 1999-10-14 Comprehensive and unique volume exploring the differences and similarities between primate communities worldwide

Reproduction and Fitness in Baboons: Behavioral, Ecological, and Life History Perspectives Larissa Swedell, Steven R. Leigh, 2006-11-25 The editors will address the questions of life history and reproduction by attempting to isolate the various components of reproductive success and fitness in baboons This requires assembling research interests in morphology behavior ecology and endocrinology of the five subspecies of *Papio* baboons By synthesizing studies of reproduction life history growth parenting ecology mate choice and mating success this volume will shed light on general features of life history traits and reproductive strategies that have made baboons successful These findings have broad applications to understanding the evolution of complex life history adaptations such as those characteristic of other primates and humans in particular Many of the top researchers on the field are contributing to this volume

Nutrient Requirements of Nonhuman Primates National Research Council, Division on Earth and Life Studies, Board on Agriculture and Natural Resources, Ad Hoc Committee on Nonhuman Primate Nutrition, Committee on Animal Nutrition, 2003-02-01 This new release presents the wealth of information gleaned about nonhuman primates nutrition since the previous edition was published in 1978 With expanded coverage of natural dietary habits gastrointestinal anatomy and physiology and the nutrient

needs of species that have been difficult to maintain in captivity it explores the impact on nutrition of physiological and life stage considerations infancy weaning immune function obesity aging and more The committee also discusses issues of environmental enrichment such as opportunities for foraging Based on the world s scientific literature and input from authoritative sources the book provides best estimates of nutrient requirements The volume covers requirements for energy carbohydrates including the role of dietary fiber proteins and amino acids fats and fatty acids minerals fat soluble and water soluble vitamins and water The book also analyzes the composition of important foods and feed ingredients and offers guidelines on feed processing and diet formulation

Primate Politics Glendon A. Schubert, Roger D. Masters, 1991 The first book to focus on the political behavior of primates also undertakes to compare human social behavior with that of nonhuman primates The editors contribute probing introductory essays to each of the three major parts of the volume in addition to their article length introductory and concluding chapters In his conclusion Masters indicates directions for future work Part I is devoted to theoretical clarification of the interrelationships between the study of primates and humans Part II presents two examples of comparisons between animal and human social behavior that throw valuable light on contemporary political and social systems Part III focuses more precisely on contemporary human politics providing two concrete examples of ethological perspectives on human political behavior In both cases nonverbal cues studied by primatologists are shown to illuminate the dynamics of human politics Contributors include Nicholas G Blurton Jones Frans B M de Waal Basil G Englis Jane Goodall Bruno Latour Roger D Masters Gregory J McHugo Elise F Plate Thelma E Rowell Glendon Schubert James N Schubert Shirley S Strum and Denis G Sullivan

Primate Anti-Predator Strategies Sharon Gursky-Doyen, K.A.I. Nekaris, 2007-05-31 Since the 1960s primatologists have recognized the impact of predation on the evolution of morphology the social systems and cognitive behavior of monkeys and apes but few studies considered its impact on the prosimians lemurs lorises galagos and tarsiers This comprehensive volume written by experts in the field narrows this gap by highlighting the effect of predation on the order Primates in general Theoretical approaches to understanding how primates perceive predation threat as well as proximate and ultimate causes to address threat and attack are considered across the primate order Although this volume concentrates on the least known group in this theoretical area the prosimians contributions by researchers on numerous primate taxa across four major geographical regions make this a novel and exciting contribution to students interested in primate evolution and ecology

Primate Adaptation and Evolution Bozzano G Luisa, 2013-10-22 Primate Adaptation and Evolution is the only recent text published in this rapidly progressing field It provides you with an extensive current survey of the order Primates both living and fossil By combining information on primate anatomy ecology and behavior with the primate fossil record this book enables students to study primates from all epochs as a single viable group It surveys major primate radiations throughout 65 million years and provides equal treatment of both living and extinct species Presents a summary of the primate fossils Reviews primate evolution Provides an

introduction to the primate anatomy Discusses the features that distinguish the living groups of primates Summarizes recent work on primate ecology

Primate Paradigms Linda Marie Fedigan, 1992-06 This critical review of behavior patterns in nonhuman primates is an excellent study of the importance of female roles in different social groups and their significance in the evolution of human social life A book that properly illuminates in rich detail not only developmental and socioecological aspects of primate behavior but also how and why certain questions are asked In addition the book frequently focuses on insufficiently answered questions especially those concerned with the evolution of primate sex differences Fedigan's book is unique because it places primate adaptations and our explanation of those patterns in a larger intellectual framework that is easily and appropriately connected to many lines of research in different fields sociology psychology anthropology neurobiology endocrinology and biology and not in inconsequential ways either James McKenna American Journal of Primatology This is the feminist critique of theories of primate and human evolution John H Cook Nature

The Guenons: Diversity and Adaptation in African Monkeys Mary E. Glenn, Marina Cords, 2006-04-11 It has been twelve years since a work relating to the long tailed African monkeys known as the guenons has been published and fifteen years have passed since the last major scientific symposium was held that was solely dedicated to current research on members of this monkey group living in the wild Since that time new guenon species and subspecies have been discovered previously unstudied guenon species have become the subject of long term research projects and knowledge of the more well known guenon species has greatly increased This volume presents novel information and keen insight on research previously studied and newly discovered A wide range of topics related to guenon biology is presented including evolution taxonomy biogeography reproductive physiology social and positional behavior ecology and conservation Composed of 26 chapters compiled by 47 authors many of whom are young investigators in their field The Guenons Diversity and Adaptation in African Monkeys provides a valuable resource for researchers and scientists in the fields of anthropology primatology zoology and conservation biology
