Morawska, 2018-12-06 This handbook presents the latest theories and findings on parenting from the evolving roles and tasks of childrearing to insights from neuroscience, prevention science, and genetics. Chapters explore the various processes through which parents influence the lives of their children, as well as the effects of parenting on specific areas of child development such as language, communication, cognition, emotion, sibling, and peer relationships, schooling, and health. Chapters also explore the determinants of parenting, including consideration of biological factors, parental self-regulation, and mental health, cultural and religious factors, and stressful and complex social conditions such as poverty, work-related separation, and divorce. In addition, the handbook provides evidence supporting the implementation of parenting programs such as prevention, early intervention, and treatments for established issues. The handbook addresses the complementary role of universal and targeted parenting programs, the economic benefits of investment in parenting programs, and concludes with future directions for research and practice. Topics featured in the Handbook include: The role of fathers in supporting children's development; Developmental disabilities and their effect on parenting and child development; Child characteristics and their reciprocal effects on parenting; Long distance parenting and its impact on families; The shifting dynamic of parenting and adult child relationships; The effects of trauma such as natural disasters, war exposure, and forced displacement on parenting. The Handbook of Parenting and Child Development Across the Lifespan is an essential reference for researchers, graduate students, clinicians, and therapists, and professionals in clinical child and school psychology, social work, pediatrics,

It provides some order in the unstructured multitude of desirable socio-emotional educational objectives and ambitions that have resulted from this movement and builds on a careful conceptual analysis. It starts out by examining the roots of the movement and discusses different emphases. Next, it makes use of instructional and psychological constructs and theories to arrive at meaningful categorizations of major domains and types of social-emotional skills. One of the key assumptions is that social and emotional attributes are malleable by means of educational interventions. The book reviews available research evidence for this assumption, taking into account psychological

studies and meta analyses It then creates new evidence based on a new meta analysis which concentrated on the effects of educational interventions on skills associated with the conscientiousness factor of the Big5 taxonomy In the final chapter the book discusses the implications for educational policy and practice a discussion in which attention is given to political and ethical questions about the desirability of treating social and emotional attributes as educational goals

Cohen, 2006-03-31 Developmental Psychopathology Volume 3 Risk Disorder and Adaptation provides a life span developmental perspective on high risk conditions and mental disorders Moreover it examines developmental pathways to resilient adaptation in the face of adversity
