

COMPARATIVE ANALYSIS

MICHAEL HAAS
Stanford University

SINCE PUBLICATION of Murdock's *Social Structure* and of Almond's and Coleman's *The Politics of the Developing Areas*,¹ it has become clear that "global" comparison is coming of age. Contrary to the expectations of early comparative anthropologists and political scientists, the recent advances are not due to a slow, painstaking accumulation of volumes of data; rather, they are the result of the rich theoretical and methodological developments of recent decades.

However, with the exception of fugitive insights in brief surveys of the literature of large-scale comparison,² no formal statement has been made hitherto on the methodology of the comparative method itself. What follows is an attempt to outline some of the key problems of "evidence and inference" inherent in comparative analysis.³

COMPARISON AND THE DEVELOPMENT OF SCIENCE⁴

The controversy over comparative *versus* case analysis is actually of only recent vintage. Just as in everyday speech the individual discovers that to communicate with others he must be willing to stereotype reality — if only for the sake of brevity — the Greek approach to knowledge (herein defined as the set of tested propositions) was based on the premise that there are certain recurrent patterns in nature. In medicine this meant that diseases could be classified and treated as a group. To Plato there are "ideal types," or forms, which only the very gifted can intuit. To Aristotle, who demanded more rigorous standards of proof, there are comparabilities, or regularities, in phenomena which those who are talented and "immersed" in the data can abstract.

By the seventeenth century, when the canons of modern scientific inquiry were being developed, the Judaeo-Christian influence had discarded the Greek
