Societal Responses To Regional Climatic Change Michael H Glantz, 2019-07-11 This volume is an outgrowth of a project undertaken by the Environmental and Societal Impacts Group ESIG for the U S Environmental Protection Agency's Office of Policy Analysis to identify societal responses to extreme climate related events in North America *Forecasting by Analogy* Michael H. Glantz, 1989 Societal Adaptation to Climate Variability and Change Sally M. Kane, Gary W.

Yohe, 2013-03-09 Changes in climate and climate variability have an effect on people's behaviour around the world and public institutions have an important part to play in influencing our ability to respond to and plan for climate risk We may be able to reduce climate risk by seeking to mitigate the threat on the one hand and by adapting to a changed climate on the other Another theme of the book is the integrated role of adaptation and mitigation in framing issues and performing analyses Adaptation costs fall most heavily on the poor and special attention needs to be paid to adaptation by the poorest populations An integrating framework is also presented to provide the context for an expansive typology of terms to apply to adaptation The 12 papers collected here use methods from a variety of disciplines and focus on different time frames for decision making from short term to the very long term Readership Technically trained readers familiar with the policy issues surrounding climate change and interested in learning the scientific underpinnings of issues related to societal adaptation

Adapting to Climate Change Joel B. Smith, Neeloo Bhatti, Gennady V. Menzhulin, Ron Benioff, Max Campos, Bubu Jallow, Frank Rijsberman, Mikhail I. Budyko, R.K. Dixon, 2012-12-06 Global climate change is one of the most important environmental issues facing the world today The United Nations Framework Convention on Climate Change FCCC acknowledges the potential for global climate change to have major effects on the world economy The work of the Intergovernmental Panel on Climate Change IPCC is focused on evaluating the scientific data on climate change and analyzing the potential responses to it One of the primary issues in the global climate change debate is how to adapt to any change that might occur The process of identifying adaptation measures and evaluating their effectiveness is the focus of this book In dealing with climate change adaptation the sequence of events in conducting these types of analyses can be generalized as follows Develop scenarios for the possible range of climate change Assess the vulnerability of various sectors of the national economy and infrastructure to climate change and Identify and evaluate measures in each sector to adapt to the climate change It is this third step that is the subject of this book In presenting this material Chapter 1 gives an overview of the concept of climate change adaptation and the general principles guiding the conduct of analyses in this area Chapters 2-7 give the results of evaluating climate change adaptation options in the agriculture water resources coastal resources forest and ecosystems fisheries and human settlements sectors **Floods** Dennis J. Parker, 2000 A comprehensive collection of new research An extensive range of case studies covering major floods and regions prone to flooding worldwide

Climate Variability Abdel Hannachi, 2012-01-18 This book provides a general introduction to the popular topic of

Community-Based Adaptation to Climate Change

E. Lisa Schipper, Jessica Ayers, Hannah Reid, Saleemul Huq, Atiq Rahman, 2014-01-21 As climate change adaptation rises up the international policy agenda matched by increasing funds and frameworks for action there are mounting questions over how to ensure the needs of vulnerable people on the ground are met Community based adaptation CBA is one growing proposal that argues for tailored support at the local level to enable vulnerable people to identify and implement appropriate community based responses to climate change themselves Community Based Adaptation to Climate Change Scaling it up explores the challenges for meeting the scale of the adaptation challenge through CBA It asks the fundamental questions How can we draw replicable lessons to move from place based projects towards more programmatic adaptation planning How does CBA fit with larger scale adaptation policy and programmes How are CBA interventions situated within the institutions that enable or undermine adaptive capacity Combining the research and experience of prominent adaptation and development theorists and practitioners this book presents cutting edge knowledge that moves the debate on CBA forward towards effective appropriate and scaled up adaptive action

Global Change Information Packet ,1992

[Towards an Integrated Impact Assessment of Climate Change: The MINK Study](#) Norman J. Rosenberg, 2012-12-06 General circulation models state that the central United States and other mid latitude continental regions will become warmer and drier as the result of greenhouse warming On this premise the dustbowl period of the 1930s was selected as an analogue of climate change and its weather records imposed on the Missouri Iowa Kansas region to assess how current agriculture forestry water resources and energy and the entire regional economy would be affected The same climate was also imposed on a MINK region forty years into the future by which time climate change may actually be felt to assess whether technological and societal change would alter the region s vulnerability to climate change Another premise of the study was that people would not suffer the impacts of climate change passively but would use available tools to ease the stress The rising atmospheric concentration of carbon dioxide expected to be the major cause of greenhouse warming also works to improve plant growth and reduce plant water use So the effects of this CO₂ fertilization were also considered in the analysis The results some of them surprising of this first fully integrated analysis of climate change impacts and responses are reported in this book

Changing Life Peter J. Taylor, Saul E. Halfon, Paul N. Edwards, 1997 In laboratories all over the world life even the idea of life is changing And with these changes whether they result in square tomatoes or cyborgs come transformations in our social order sometimes welcome sometimes troubling Changing Life offers a close look at how the mutable forms and concepts of life link the processes of science to those of information finance and commodities These essays about planetary

management and genome sequencing ecologies and cyborgs address actual and imagined transformations at the center and at the margins of transnational relations during the post Cold War era and in times to come

Climate Justice and Geoengineering Christopher J. Preston, 2016-09-21 It is already clear that climate engineering raises numerous troubling ethical issues The pertinent question yet to be addressed is how the ethical issues raised by climate engineering compare to those raised by alternative proposals for tackling climate change This volume is the first to put the ethical issues raised by climate engineering into a comprehensive comparative context so that the key ethical challenges of these technologies can be better measured against those of alternative climate policies Addressing the topic specifically through the lens of justice contributors include both advocates of climate intervention research and its sceptics The volume includes a helpful blend of the theoretical and the practical with contributions from authors in philosophy engineering public policy social science geography sustainable development studies economics and climate studies This cross disciplinary collection provides the start of an important and more contextualized second generation analysis of climate engineering and the difficult public policy decisions that lie ahead

Environmental Risks and the Media Barbara Adam, Stuart Allan, Cynthia Carter, 2013-01-11 Environmental Risks and the Media explores the ways in which environmental risks threats and hazards

are represented transformed and contested by the media At a time when popular conceptions of the environment as a stable natural world with which humanity interferes are being increasingly contested the medias methods of encouraging audiences to think about environmental risks from the BSE or mad cow crisis to global climate change are becoming more and more controversial Examining large scale disasters as well as everyday hazards the contributors consider the tensions between entertainment and information in media coverage of the environment How do the media frame expert counter expert and lay public definitions of environmental risk What role do environmental pressure groups like Greenpeace or eco warriors and green guerrillas play in shaping what gets covered and how Does the media emphasis on spectacular events at the expense of issue sensitive reporting exacerbate the public tendency to overestimate sudden and violent risks and underestimate chronic long term ones

Americans and Their Weather William B. Meyer, 2014-10-08 This book traces the major exchanges that have occurred since colonial times in the role of weather in life and livelihood in the U S The intent is to relate how shifts in ordinary human activities have been influenced and altered the significance of climate patterns patterns that have been far more stable than the society experiencing them development of weather science where appropriate At times persistent features of our climate and recurrent weather have acted as help or hindrance hazard or resource And as ways of life in country have changed these features have become hazard of resources in new ways

Reason in a Dark Time Dale Jamieson, 2014-02-28 From the 1992 Rio Earth Summit to the 2009 Copenhagen Climate Conference there was a concerted international effort to stop climate change Yet greenhouse gas emissions increased atmospheric concentrations grew and global warming became an observable fact of life In this book philosopher Dale Jamieson explains what climate change is why we have failed to stop it and why it still matters what we do Centered in philosophy the volume also treats the scientific historical economic and political dimensions of climate change Our failure to prevent or even to respond significantly to climate change Jamieson argues reflects the impoverishment of our systems of practical reason the paralysis of our politics and the limits of our

cognitive and affective capacities The climate change that is underway is remaking the world in such a way that familiar comforts places and ways of life will disappear in years or decades rather than centuries Climate change also threatens our sense of meaning since it is difficult to believe that our individual actions matter The challenges that climate change presents go beyond the resources of common sense morality it can be hard to view such everyday acts as driving and flying as presenting moral problems Yet there is much that we can do to slow climate change to adapt to it and restore a sense of agency while living meaningful lives in a changing world

Water Robin Clarke, 2013-12-16 Only 3 per cent of the world's water is freshwater and about one third of that is inaccessible The rest is very unevenly distributed parts of Canada and the Amazon for example are both more than amply supplied Terrible and permanent water stress can be seen among other places in the drylands of Africa caused not just by drought but by poverty leading to poor land management and over population As with so many other things those most badly affected are the poor nations of the world who are frequently faced with an impossible dilemma they must either limit their water use to decreasingly available unused water or they must make do with used but untreated and therefore dangerous water They cannot afford the technology to recycle safely In rural regions increased populations and frequent droughts mean that in addition to the lack of fresh clean water for human consumption there are inadequate supplies for crop irrigation An enormous proportion of the world's population lives in countries which share their primary sources of water with other nations for example 12 countries depend on the Danube 10 on the Niger 9 on the Nile Water is essential to development both in poor countries and in rich the use made of a major river in one country can affect seriously the possibilities open to another Hence the international shortage is a major threat to world security To take but one example if Turkey goes ahead with its plan to dam the Euphrates then Iraq and Syria already water stressed countries could be in even more serious trouble they are hardly likely to accept the situation This book describes the world situation addresses the nature of the problems shows the ways in which they have been shamefully neglected in all development and economic thinking and proposes some solutions often simple and well tried but which could ensure water security for the whole world
