Community Action and Climate Change Jennifer Kent, 2015-11-19 The failure of recent international negotiations to progress global action on climate change has shifted attention to the emergence of grassroots sustainability initiatives These civil society networks display the potential to implement social innovation and change processes from the bottom up Recent scholarship has sought to theorise grassroots community based low carbon practices in terms of their sustainability transition potential However there are few empirical examples that demonstrate the factors for success of community based social innovations in achieving more widespread adoption outside of their local sustainability niche The book seeks to address two significant gaps related to grassroots climate action firstly the continuing dominance of the individualisation of responsibility for climate change action which presupposes that individuals hold both the ability and desire to shift their behaviours and lifestyle choices to align with a low carbon future Secondly the potential for community based collectives to influence mainstream climate change governance an area significantly under researched Drawing on empirical research into Australian Climate Action Groups CAGs and related international research the book argues that grassroots community based collective action on climate change holds the key to broader social change This book will be of great interest to students and scholars of climate change citizen participation environmental sociology and sustainable development

analyses amount to a methodological experiment across history of science theology art theory and history architecture future studies climatology computer modelling and agricultural policy This book is a major contribution to understanding how we are precluding effective climate action and designing futures that resemble our worst nightmares **Global Energy** Paul Ekins, Michael J. Bradshaw, Jim Watson, 2015 Energy and access to energy are essential to human life civilisation and development A number of energy issues including energy security energy prices and the polluting emissions for energy use now have high prominence on global agendas of policy and diplomacy In addressing these and other global energy issues the purpose of this book is to lay out the broad global energy landscape exploring how these issues might develop in coming decades and the implications of such developments for energy policy There are great uncertainties which will be identified in respect of some of these issues but many of the defining characteristics of the landscape are clear and the energy policies of all countries will need to be broadly consistent with these if they are to be feasible and achieve their objectives The book therefore provides information about and analysis of energy and related resources and the technologies that have been and are being developed to exploit them that is essential to understanding how the global energy system is developing and how it might develop in the future But its main focus is the critical economic social political and cultural issues that will determine how energy systems will develop and which technologies are deployed why by whom and who will benefit from them The book has three Parts Part I sets out the current global context for energy system developments outlining the essential trends of global energy supply and demand and atmospheric emissions from the past and going forward and their driving forces Part II explores the options and choices covering both energy demand and energy supply facing national and international policymakers as they confront the challenges of the global context outlined in Part I Part III of the book brings together the discussion in Parts I and II with consideration of possible global energy and environmental futures and of the energy policy choices which will determine which future actually comes to pass *Eco-efficiency, Regulation, and Sustainable Business* Raimund Bleischwitz, Peter Hennicke, 2004-01-01 This book presents important new research on applied eco efficiency concepts throughout Europe The aim of eco efficiency is to achieve market based measures of environmental protection in order to enhance the prospects for sustainable development and achieve positive economic and ecological benefits The distinguished authors discuss a number of themes surrounding eco efficiency including the necessary conditions for technological dissemination and ecological modernization and the role of government in enabling businesses and society to participate actively in this process In particular they highlight the application of existing European based policies concerning material flows and energy The authors also investigate some new concepts of sustainable development and provide a useful introduction to material flows analysis In further chapters they study the emerging regulatory policies for eco efficiency and examine the issues of sustainable business and consumption strategies Environmental and ecological economists policymakers and political scientists will welcome this original and insightful book which aims to translate the theory of
