be both alive and dead at the same time and a particle can be in two places at once And that particle is also a wave everything in the quantum world can be described in terms of waves or entirely in terms of particles These interpretations were all established by the end of the 1920s by Erwin Schrödinger Werner Heisenberg Paul Dirac and others But no one has yet come up with a commonsense explanation of what is going on In this concise and engaging book astrophysicist John Gribbin offers an overview of six of the leading interpretations of quantum mechanics Gribbin calls his account agnostic explaining that none of these interpretations is any better or any worse than any of the others Gribbin presents The Copenhagen Interpretation promoted by Niels Bohr and named by Heisenberg The Pilot Wave Interpretation developed by Louis de Broglie The Many Worlds Interpretation The Decoherence Interpretation The Ensemble Non Interpretation The Timeless Transactional Interpretation which theorized waves going both forward and backward in time All of these interpretations are crazy Gribbin warns and some are more crazy than others but in the quantum world being more crazy does not necessarily mean more wrong

McVoy, 2013-11-11 A NATO Advanced Studies Institute was held June 12-23 1978 at the University of Wisconsin in Madison Wisconsin It was a topical Institute in theoretical nuclear physics and had the somewhat novel feature of focussing not on a single topic but on two closely allied ones pion nucleus and heavy ion physics These two fields both dedicated to the investigation of short wavelength properties of nuclei have many techniques and concepts in common and essentially become one in the topic of relativistic heavy ion physics The purpose of including both in a single Institute was to encourage the practitioners in each of these fields to learn from those in the other to judge from the liveliness of the questioning which ensued the purpose was well served indeed Because the Institute was viewed as one which served both educational and research ends the lecturers took particular pains to develop their subjects in a careful coherent sequence The result is a compendium of advanced techniques and current results in these two rapidly expanding fields of nuclear theory which should serve interested physicists as an ideal introduction to the fields In addition to the support provided by the Scientific Affairs Division of NATO substantial financial assistance was provided by the U S National Science Foundation and the Graduate School of the University of Wisconsin

Sample Book Insights

- 1 The standard way of looking at the quantum world is based on the idea of waves and it largely ignores the caveat as if The matrices approach is more honest since it does not pretend to explain what is happening between state A and state B but it provides less solace than the Schrödinger equation
- 2 The Copenhagen Interpretation states that we do not know anything except for the outcomes of experiments These outcomes depend on what the experiments are designed to measure These questions are colored by our everyday experiences of the world on a scale much larger than atoms and other quantum entities
- 3 The Copenhagen Interpretation which is the basis of the modern understanding of quantum mechanics says that the wave function of a quantum entity spreads out to fill up an area evenly and then collapses when the area is examined This is not the same as saying that the electron always was in one half of the box or the other as the CI insists that the collapse only happens when the contents of the box in the lab are examined
- 4 The CI states that an electron is emitted from a source on one side of the experiment as a particle It immediately dissolves into a probability wave which spreads through the experiment and heads towards the detector screen on the other side This wave passes through however many holes are open interfering with itself or not as appropriate and arrives at the detector as a pattern of probabilities
