enable the most commonly used and important functions of z OS Communications Server TCP/IP. In this IBM Redbooks publication we provide an introduction to z OS Communications Server TCP/IP. We then discuss the system resolver showing the implementation of global and local settings for single and multi stack environments. We present implementation scenarios for TCP/IP Base functions, Connectivity, Routing, Virtual MAC support, and sysplex subplexing. *IBM z/OS V1R13 Communications Server TCP/IP Implementation: Volume 2 Standard Applications* Mike Ebberts, Rama Ayyar, Octavio L. Ferreira, Yohko Ojima, Gilson Cesar de Oliveira, Mike Riches, Maulide Xavier, IBM Redbooks, 2011-12-27.

For more than 40 years IBM mainframes have supported an extraordinary portion of the world's computing work, providing centralized corporate databases and mission-critical enterprise-wide applications. The IBM System z, the latest generation of the IBM distinguished family of mainframe systems, has come a long way from its IBM System 360 heritage. Likewise, its z OS operating system is far superior to its predecessors, providing among many other capabilities, world-class state-of-the-art support for the TCP/IP Internet protocol suite. TCP/IP is a large and evolving collection of communication protocols managed by the Internet Engineering Task Force (IETF), an open volunteer organization. Because of its openness, the TCP/IP protocol suite has become the foundation for the set of technologies that form the basis of the Internet. The convergence of IBM mainframe capabilities with Internet technology, connectivity, and standards, particularly TCP/IP, is dramatically changing the face of information technology and driving requirements for ever more secure, scalable, and highly available mainframe TCP/IP implementations. The IBM z OS Communications Server TCP/IP Implementation series provides understandable step-by-step guidance about how to enable the most commonly used and important functions of z OS Communications Server TCP/IP. This IBM Redbooks publication provides useful implementation scenarios and configuration recommendations for many of the TCP/IP standard applications that z OS Communications Server supports. For more specific information about z OS Communications Server standard applications, high availability, and security, see the other volumes in the series: IBM z OS V1R13 Communications Server TCP/IP Implementation Volume 1: Base Functions, Connectivity, and Routing (SG24-7996); IBM z OS V1R13 Communications Server TCP/IP Implementation Volume 3: High Availability, Scalability, and Performance (SG24-7998); IBM z OS V1R13 Communications Server TCP/IP Implementation Volume 4: Security and Policy-Based Networking (SG24-7999). For comprehensive descriptions of the individual parameters for setting up and using the functions that we describe in this book, along with step-by-step checklists and supporting examples, see the following publications: z OS Communications Server IP Configuration Guide (SC31-8775); z OS Communications Server IP Configuration Reference (SC31-8776); z OS Communications Server IP User's Guide and Commands (SC31-8780). This book does not duplicate the information in those publications. Instead, it complements them with practical implementation scenarios that can be useful in your environment. To determine at what level a specific function was introduced, see z OS Communications Server New Function Summary (GC31-8771). For complete details, we encourage you to review the documents that are listed in the additional resources section at
