The Loneliness Of Children:

The Loneliness of Children John Killinger, 1980

Loneliness Among Children With Special Needs Malka

Margalit, 2012-12-06 *Loneliness Among Children With Special Needs* is a groundbreaking volume that examines this vitally important but heretofore neglected topic. Based on the shared view from both clinical experience and research that children with disabilities experience more loneliness than nondisabled children, this book integrates the existing knowledge, research, and applications in order to provide a model for the examination and understanding of the loneliness experiences of children with learning disabilities, behavior disorders, mild mental retardation, and emotional difficulties. Divided into five sections, the first attempts to clarify the characteristics of the lonely child, followed by a section with chapters devoted to environments and interpersonal relations. The third section is concerned with the subtyping of loneliness and adjustment, and the fourth section discusses the outcomes of loneliness through coping and interventions. The final section provides a summary of the research using the proposed loneliness model for children with disabilities. This volume is essential reading for all researchers, clinicians, educators, and students who work with children with special needs and who, as stated in the Preface, see the importance of companionship for promoting growth of children with special needs and the costs of loneliness for current life and future adjustment.

Lonely Children and Adolescents Malka Margalit, 2010-06-25

From texting and social networking sites to after school activities, young people have many opportunities to interact with one another, and yet loneliness and isolation trouble today's youth in increasing numbers. Many children and teens report feeling lonely even in the midst of family and friends, and childhood loneliness is a prime risk factor for adult alienation. *Lonely Children and Adolescents: Self Perceptions, Social Exclusion, and Hope* illuminates seldom explored experiences of social isolation among young people as well as the frustrations of the parents and teachers who wish to help. This groundbreaking book conceptualizes loneliness not simply as the absence of social connections but as a continuum of developmental experience often growing out of the conflict between opposite needs: to be like one's peers yet be one's unique self. The author draws clear distinctions between loneliness and solitude and identifies genetic and environmental characteristics, i.e., social, psychological, familial, and educational, that can be reinforced to help children become more resilient and less isolated. In addition, therapeutic approaches are described that challenge loneliness by encouraging empowerment, resilience, and hope from proven strategies to promising tech-based interventions. Highlights include: Developmental perspectives on loneliness; Schools and the role of teachers from preschool to high school; Peer relations, e.g., cliques, bullies, exclusion, and popularity; Lonely children, lonely parents; models of coping; Loneliness in the virtual world; Prevention and intervention strategies at home, at school, in therapy. Asking its readers to rethink many of their assumptions about social competence and isolation, this volume is essential reading for researchers and professionals in clinical child, school, developmental, and educational psychology, allied education disciplines, social work, and social and personality psychology.
