Digital Enterprises Henderik A. Proper, Bas van Gils, Kazem Haki, 2023-11-14 This book explores different aspects of and provides concrete suggestions to meet the three main challenges for becoming a Digital Enterprise: the transition to the digital age, the emergence of service ecosystems and the growing role of data as a key underlying resource. As a result of these intertwined and mutually amplifying trends, today's enterprises are confronted with several challenges that profoundly impact their design, from the definitions of products and services offered to their clients via the business processes that deliver these products and services to the underlying IT infrastructure. The contributions, which are written by leading enterprise architecture researchers and managers of large corporations, cover four key aspects which form each one part of the book. Part I presents experiences how different enterprises currently already need to embrace and exploit new challenges like blockchain, customer-centric services or value co-creation networks. Part II looks at the need for a new design logic, i.e. the need for new ways of thinking regarding the design of enterprises. Part III is concerned with the coordination needed among different stakeholders of the ensuing continuous transformations. Part IV eventually reflects on the ongoing consequences for enterprise modeling as used to capture both the current affairs of an enterprise as well as design study its possible future affairs. The target audience of this book are both master and PhD level students who want to gain insights into key aspects of the challenges confronting digital enterprises as well as enterprise architects and information managers working in enterprises that are on their way to become digital.

Networked Digital Technologies, Part II Filip Zavoral, Jakub Yaghob, Pit Pichappan, Eyas El-Qawasmeh, 2010-06-30 On behalf of the NDT 2010 conference, the Program Committee and Charles University in Prague, Czech Republic, we welcome you to the proceedings of the Second International Conference on Networked Digital Technologies (NDT 2010). The NDT 2010 conference explored new advances in digital and Web technology applications. It brought together researchers from various areas of computer and information sciences who addressed both theoretical and applied aspects of Web technology and Internet applications. We hope that the discussions and exchange of ideas that took place will contribute to advancements in the technology in the near future. The conference received 216 papers, out of which 85 were accepted, resulting in an acceptance rate of 39%. These accepted papers are authored by researchers from 34 countries covering many significant areas of Web applications. Each paper was evaluated by a minimum of two reviewers. Finally, we believe that the proceedings document the best research in the studied areas. We express our thanks to the Charles University in Prague, Springer, the authors and the organizers of the conference.

The Network Experience Peter H.M. Vervest, Diederik W. van Liere, Li Zheng, 2008-10-14 Digital networking technologies are empowering organizations to form dynamic networks generating exceptional or smart results. These Smart Business Networks (SBNs) enable individual organizations to compete more effectively and to respond better to a changing world. This idea attracted a diverse group of

academic scholars and business professionals to Beijing from May 19-23, 2008, hosted by Tsinghua University. They discovered new ways to manage network resources, operate business processes across a network, create a business operations platform, understand the importance of network position, and the smart mastering of technology. Effective managers, they concluded, must have a firm understanding of these fundamental network concepts in order to orchestrate the networks of the future. This book presents the results of an intense and energizing event which resulted in new theoretical foundations and practical insights.

Globalization of Professional Services Ulrich Bäumer, Peter Kreutter, Wolfgang Messner, 2012-06-05

In the past, services had a strong local and national focus. Professional services were very likely to be independently and autonomously organized from country to country in order to cater to local needs and local legal requirements. This has since changed radically, and highly integrated business and delivery models around the globe have become the status quo in clients' businesses and strategies. Serving clients on a global level requires professional services firms to adopt a structural change from local to distributed global sales and delivery. This book brings together many years of experience, current perspectives, and future ideas of international business practitioners, academics, and market researchers. Along those lines, it is structured into four parts: Part I: Winning Strategies and Innovative Ideas lays the book's foundation; it discusses core strategies behind the globalization movement and introduces the major paradigms and ideas. Part II: Successful Processes for Realization provides solutions for how to establish successful processes for delivering global professional services. Part III: Inspired Talent Management goes to the core of the professional services industry, attracting, developing, and keeping the right talent in the right locations. Finally, Part IV: Experiences and Case Studies on all aspects related to successfully building a globalized professional services firm. In short, this handbook provides professional services firms and their clients alike with a sound foundation for responding strategically to fundamental global changes and turning them into business advantages. It offers a comprehensive perspective of why and how to successfully globalize a professional services firm.

Smart Business Networks Peter H.M. Vervest, Eric van Heck, Ken Preiss, Louis-Francois Pau, 2005-12-14

Scientists from management and strategy, information systems engineering, and telecommunications have discussed a novel concept: Smart Business Networks. They see the future as a developing web of people and organizations bound together in a dynamic and unpredictable way, creating smart outcomes from quickly reconfiguring links between actors. The question is: What should be done to make the outcomes of such a network smart, that is, just a little better than that of your competitor? More agile, with less pain, with more return to all the members of the network now and over time. The technical answer is to create a business operating system that should run business processes on different organisational platforms. Business processes would become portable. The end-to-end management of processes running across many different organizations in many different forms would become possible. This book presents you the outcomes of an energizing and new direction in management science.
