So You Wanna Be A Gambler Card Counting:

So You Wanna Be a Gambler John Patrick, 1986-06-01 *Blackjack Card Counting - How to be a Professional Gambler* Greg Elder, 2013-03-04 How to become a professional blackjack card counter The good news is you don't have to be a mathematical genius to learn how to count cards the bad news is many of the Hollywood movies depicting the life of a card counter as fast cash and penthouse suites make it all seem a little too easy This book will give you a realistic look at what it takes to be a professional card counter I will take you step by step through the entire process As a former educator I came up with a simple progressive learning model using a basic Hi Lo level one count system that in combination will make it much easier for you to learn how to count cards I broke the entire system down to make it as easy as possible so you can get into the casino quicker Many times people do not even attempt to learn card counting because they think it is too hard If they do attempt it they get frustrated after a short time because the system is so complex they get lost in the mathematics The only two things you need to be able to do to learn card counting are memorize and practice This book isn't filled with hypothetical theories it shows you the exact steps you need to take to learn to count cards Now don't get me wrong learning everything in this book will not be easy but most people can do it if they dedicate themselves to learning However card counting is much more than simply learning the process the hard part is finding the right games and not being detected by the casinos Those areas will be covered as well Don't worry the courts have ruled that counting is not cheating or illegal but in Vegas they can throw you out because it is a private establishment not because you are doing anything wrong Counting cards is simply using your mind in a game of skill If using your mind is cheating then I don't know how else to play This book is for those of you familiar with blackjack that want to find out what card counting is all about If you're tired of losing and are ready to take your game to the next level so you have the advantage over the casino this book is for you If you can already count cards you may pick up a few tips here and there but you probably already know most of the content in the book **Gambling Theory and Other Topics** Mason Malmuth, 1999 Absolutely must reading for all serious gamblers Most people who gamble are basically attracted by the action and the excitement that this form of entertainment offers But a small number of people are quite successful at it How is this so What helps these few to make decisions that devastate their opponents And what do you need to do to become successful at this extremely challenging occupation This text attempts to answer these questions You will be introduced to the dynamic concept of non self weighting strategies and shown how these strategies apply not only at the very exciting gaming tables but in real life as well In addition risk and fluctuations are discussed in terms of the standard deviation and their relationship to each other and to your bankroll Some of the other topics addressed are bankroll requirements win rate accuracy free bets which blackjack count is best lottery fallacies dangerous ideas poker tournament strategies including when it is correct to rebuy settling up in tournaments pai gow poker super pan nine the world's greatest gamblers and building pyramids **John Patrick's Advanced Blackjack** John Patrick, 2006-12 Offers advanced blackjack

players advice on strategy and money management and explains the technique of card counting **Roulette-Slots** John Patrick,1983-11 **Games, Gambling, and Probability** David G. Taylor,2021-06-22 Many experiments have shown the human brain generally has very serious problems dealing with probability and chance A greater understanding of probability can help develop the intuition necessary to approach risk with the ability to make more informed and better decisions The first four chapters offer the standard content for an introductory probability course albeit presented in a much different way and order The chapters afterward include some discussion of different games different ideas that relate to the law of large numbers and many more mathematical topics not typically seen in such a book The use of games is meant to make the book and course feel like fun Since many of the early games discussed are casino games the study of those games along with an understanding of the material in later chapters should remind you that gambling is a bad idea you should think of placing bets in a casino as paying for entertainment Winning can obviously be a fun reward but should not ever be expected Changes for the Second Edition New chapter on Game Theory New chapter on Sports Mathematics The chapter on Blackjack which was Chapter 4 in the first edition appears later in the book Reorganization has been done to improve the flow of topics and learning New sections on Arkham Horror Uno and Scrabble have been added Even more exercises were added The goal for this textbook is to complement the inquiry based learning movement In my mind concepts and ideas will stick with the reader more when they are motivated in an interesting way Here we use questions about various games not just casino games to motivate the mathematics and I would say that the writing emphasizes a just in time mathematics approach Topics are presented mathematically as questions about the games themselves are posed Table of Contents Preface 1 Mathematics and Probability 2 Roulette and Craps Expected Value 3 Counting Poker Hands 4 More Dice Counting and Combinations and Statistics 5 Game Theory Poker Bluffing and Other Games 6 Probability Stochastic Matrices Board Game Movement 7 Sports Mathematics Probability Meets Athletics 8 Blackjack Previous Methods Revisited 9 A Mix of Other Games 10 Betting Systems Can You Beat the System 11 Potpourri Assorted Adventures in Probability Appendices Tables Answers and Selected Solutions Bibliography Biography Dr David G Taylor is a professor of mathematics and an associate dean for academic affairs at Roanoke College in southwest Virginia He attended Lebanon Valley College for his B S in computer science and mathematics and went to the University of Virginia for his Ph D While his graduate school focus was on studying infinite dimensional Lie algebras he started studying the mathematics of various games in order to have a more undergraduate friendly research agenda Work done with two Roanoke College students Heather Cook and Jonathan Marino appears in this book Currently he owns over 100 different board games and enjoys using probability in his decision making while playing most of those games In his spare time he enjoys reading cooking coding playing his board games and spending time with his six year old dog Lilly
