Taking Action Cognitive Neuroscience Perspectives On Intentional Acts Hb:

Taking Action Scott H. Johnson-Frey, 2003 Recent cognitive neuroscientific research that crosses traditional conceptual boundaries among perceptual cognitive and motor functions in an effort to understand intentional acts Traditionally neurologists neuroscientists and psychologists have viewed brain functions as grossly divisible into three separable components each responsible for either perceptual cognitive or motor systems The artificial boundaries of this simplification have impeded progress in understanding many phenomena particularly intentional actions which involve complex interactions among the three systems This book presents a diverse range of work on action by cognitive neuroscientists who are thinking across the traditional boundaries The topics discussed include catching moving targets the use of tools the acquisition of new actions feedforward and feedback mechanisms the flexible sequencing of individual movements the coordination of multiple limbs and the control of actions compromised by disease The book also presents recent work on relatively unexplored yet fundamental issues such as how the brain formulates intentions to act and how it expresses ideas through manual gestures Encyclopedia of Neuroscience, Volume 1 Larry R. Squire, 2009-06-12 The Encyclopedia of the Neuroscience explores all areas of the discipline in its focused entries on a wide variety of topics in neurology neurosurgery psychiatry and other related areas of neuroscience Each article is written by an expert in that specific domain and peer reviewed by the advisory board before acceptance into the encyclopedia Each article contains a glossary introduction a reference section and cross references to other related encyclopedia articles Written at a level suitable for university undergraduates the breadth and depth of coverage will appeal beyond undergraduates to professionals and academics in related fields **Oxford Handbook of Human Action** Ezequiel Morsella, John A. Bargh, Peter M. Gollwitzer, 2009 In the last decade there has been a tremendous surge of research on the mechanisms of human action This volume brings together this new knowledge in a single concise source covering most if not all of the basic questions regarding human action What are the mechanisms by which action plans are acquired learned mentally represented activated selected and expressed The chapters provide up to date summaries of the published research on this question with an emphasis on underlying mechanisms This bible of action research brings together the current thinking of eminent researchers in the domains of motor control behavioral and cognitive neuroscience psycholinguistics biology as well as cognitive developmental social and motivational psychology It represents a determined multidisciplinary effort spanning across various areas of science as well as national boundaries **Handbook of Neurosociology** David D. Franks, Jonathan H. Turner, 2012-07-09 Until recently a handbook on neurosociology would have been viewed with skepticism by sociologists who have long been protective of their disciplinary domain against perceived encroachment by biology But a number of developments in the last decade or so have made sociologists more receptive to biological factors in sociology and social psychology Much of this has been encouraged by the coeditors of this volume David Franks and Jonathan Turner This new interest has been increased by the explosion of

research in neuroscience on brain functioning and brain environment interaction via new MRI technologies with implications for social and psychological functioning This handbook emphasizes the integration of perspectives within sociology as well as between fields in social neuroscience For example Franks represents a social constructionist position following from G H Mead s voluntaristic theory of the act while Turner is more social structural and positivistic Furthermore this handbook not only contains contributions from sociologists but leading figures from the psychological perspective of social neuroscience

The Cognitive Neurosciences Michael S. Gazzaniga, 2004 The third edition of a work that defines the field of cognitive neuroscience with extensive new material including new chapters and new contributors

The Routledge Handbook of Collective Intentionality Marija Jankovic, Kirk Ludwig, 2017-11-02 The Routledge Handbook of Collective Intentionality provides a wide ranging survey of topics in a rapidly expanding area of interdisciplinary research It consists of 36 chapters written exclusively for this volume by an international team of experts What is distinctive about the study of collective intentionality within the broader study of social interactions and structures is its focus on the conceptual and psychological features of joint or shared actions and attitudes and their implications for the nature of social groups and their functioning This Handbook fully captures this distinctive nature of the field and how it subsumes the study of collective action responsibility reasoning thought intention emotion phenomenology decision making knowledge trust rationality cooperation competition and related issues as well as how these underpin social practices organizations conventions institutions and social ontology Like the field the Handbook is interdisciplinary drawing on research in philosophy cognitive science linguistics legal theory anthropology sociology computer science psychology economics and political science Finally the Handbook promotes several specific goals 1 it provides an important resource for students and researchers interested in collective intentionality 2 it integrates work across disciplines and areas of research as it helps to define the shape and scope of an emerging area of research 3 it advances the study of collective intentionality

Sign Language Research Sixty Years Later: Current and Future Perspectives Valentina Cuccio, Erin Wilkinson, Brigitte Garcia, Adam Schembri, Erin Moriarty, Sabina Fontana, 2022-11-14

What can we make of theories of embodiment and the role of the human mirror neuron system? Analia Arevalo, Juliana Baldo, Fernando González-Perilli, Agustin Ibanez, 2016-03-09 In recent years work surrounding theories of embodiment and the role of the putative mirror neuron system MNS in humans has gained considerable attention If humans have developed a network of neurons that fire in response to other beings actions as has been shown in macaques this system could have vast implications for all kinds of cognitive processes unique to humans such as language learning empathy and communication in general The goal of tapping into and understanding such a system is a fascinating yet challenging one One form of embodiment embodied linguistics suggests that the way we process linguistic information is linked to our physical experience of the concept conveyed by each word The interaction between these cognitive systems i e language and motor processing may occur thanks to the firing of neurons making up the MNS The

possible interdependence between different cognitive systems has implications for healthy as well as pathological profiles and in fact work in recent years has also explored the role of embodiment and or the MNS in clinical populations such as stroke Parkinson s Disease Alzheimer s Disease and Autism among others Research on embodiment and or the MNS has been approached with a number of different methodologies but the results obtained with these different methodologies have not been entirely consistent generating doubts regarding the theories The question has been raised as to what this line of inquiry can gain from the types of evidence contributed by functional neuroimaging methods carried out with healthy volunteers versus behavioral or lesion symptom mapping methods employed with neurologically compromised individuals Of particular interest are the clinical applications of this line of research If indeed a system exists which reflects a tight link between for example the human language and motor systems then the obvious challenge is to tap into this system to create useful therapies that can provide rehabilitation where damage has occurred This Research Topic brought together work conducted with healthy and patient populations using several behavioral and imaging techniques as well as insightful commentaries and opinion pieces We believe the combined work of the participating authors is an important contribution to this intriguing line of research and an excellent point of reference for future work
