Dahlgaard-Park,2015-05-29 Society globally has entered into what might be called the service economy Services now constitute the largest share of GDP in most countries and provide the major source of employment in both developed and developing countries Services permeate all aspects of peoples lives and are becoming inseparable from most aspects of economic activity Quality management has been a dominating managerial practice since World War II With quality management initially associated with manufacturing industries one might assume the relevance of quality management might decrease with the emergence of the service economy To the contrary the emergence of the service economy strengthened the importance of quality issues which no longer are associated only with manufacturing industries but are increasingly applied in all service sectors as well Today we talk not only about product or service quality but have even expanded the framework of quality to quality of life and quality of environment Thus quality and services have emerged in parallel as closely interrelated fields The Encyclopedia of Quality and the Service Economy explores such relevant questions as What are the characteristics nature and definitions of quality and services How do we define quality of products quality of services or quality of life How are services distinguished from goods How do we measure various aspects of quality and services How can products and service quality be managed most effectively and efficiently What is the role of customers in creation of values These questions and more are explored within the pages of this two volume A to Z reference work *Science SQC, New Quality Control Principle* Kakuro Amasaka,2012-12-06 As is represented by the world s top level Japanese automotive manufacturers Japanese manufacturers have been climbing to winning positions in global businesses The driving force of their success includes responsiveness to diversifying market needs and elevating quality requirements clarification of development concepts that facilitate new technology application of technology to product planning and design advanced production control systems that elaborately utilize state of the art manufacturing technologies and flexible efficient production Many Japanese manufacturers succeeded in fulfilling these factors mainly because they utilize Japanese style Lean Production Systems or the so called Toyota Production System TPS and Japanese style scientific quality management approaches such as Statistical Quality Control SQC and Total Quality Management TQM in order to improve their corporate management technology As severe competition among manufacturers intensify both in Japan and overseas action against

quality problems that remarkably diminish customer satisfaction and customer first quality management is becoming important Scientific quality control methods that aim to optimize production processes for building in quality were undermined by the past expansion of quantity oriented manufacturing through automation with massive and heavy equipment
