categories might be given by the genes which by culture and which by language And what might the cross linguistic similarities and differences contribute to our understanding of conceptual and linguistic development The kinds of mapping principles structures and processes that link language and non linguistic knowledge must accommodate not just one language but the rich diversity that has been uncovered The integration of knowledge and methodologies necessary for real progress in answering these questions has happened only recently as experimental approaches have been applied to the cross linguistic study of word meaning In Words and the Mind Barbara Malt and Phillip Wolff present evidence from the leading researchers who are carrying out this empirical work on topics as diverse as spatial relations events emotion terms motion events objects body part terms causation color categories and relational categories By bringing them together Malt and Wolff highlight some of the most exciting cross linguistic and cross cultural work on the language thought interface from a broad array of fields including linguistics anthropology cognitive and developmental psychology and cognitive neuropsychology Their results provide some answers to these questions and new perspectives on the issues surrounding them
