Taking Stock Of The Regional Fishery Management Councils:

Taking Stock of the Regional Fishery Management Councils Josh Eagle, Sarah Newkirk, Barton H. Thompson (Jr.), 2003
Over a third of the nation's fish stocks currently are overfished. These stocks historically supported some of America's most important fisheries: cod, salmon, rockfish, tuna, and red snapper, to list only a few. This study, initiated and supported by the Pew Charitable Trusts, looks in detail at the mandates, constitution, rules, and procedures of the regional fish councils to determine whether the councils can effectively manage the nation's fisheries. The report discussed four key problems that plague the councils and suggests ways to implement changes.

Sea Change James Workman, Amanda Leland, 2005-09-30
Sea Change is the captivating, deeply human tale of how fishermen, along with some unlikely allies, helped carry out the biggest conservation success story you've never heard of. Exploring a victory for the world's most vital ecosystem, *Sea Change* tells the story of unlikely partnerships and surprising solutions that are quietly revolutionizing the fishing industry. Like in other ocean areas, the Gulf Coast fisheries were being fished out to the detriment of wildlife and the people whose livelihoods and communities hinge on sea catch. Fisherman Keith Buddy Guindon had followed every suggested policy and practice to no avail until he, along with scientists, government agencies, and environmental groups, helped lead real change that is preventing overfishing and securing resource longevity. *Sea Change* demonstrates that success is possible: that the time is now and the methods are here to conserve our natural world and the people who depend on it.

Guide to U.S. Environmental Policy Sally K. Fairfax, Edmund Russell, 2014-08-14
Guide to U.S. Environmental Policy provides the analytical connections showing readers how issues and actions are translated into public policies and persistent institutions for resolving or managing environmental conflict in the U.S. The guide highlights a complex decision-making cycle that requires the cooperation of government, business, and an informed citizenry to achieve a comprehensive approach to environmental protection. The book's topical, operational, and relational essays address development of U.S. environmental policies, the federal agencies and public and private organizations that frame and administer environmental policies, and the challenges of balancing conservation and preservation against economic development, the ongoing debates related to turning environmental concerns into environmental management, and the role of the U.S. in international organizations that facilitate global environmental governance.

Key Features: 30 essays by leading conservationists and scholars in the field investigate the fundamental political, social, and economic processes and forces driving policy decisions about the protection and future of the environment. Essential themes traced through the chapters include natural resource allocation and preservation, human health, rights of indigenous peoples, benefits of recycling, economic and other policy areas impacted by responses to green concerns, international cooperation, and immediate and long-term costs associated with environmental policy. The essays explore the impact made by key environmental policymakers, presidents, and politicians, as well as the topical issues that have influenced U.S. environmental public policy from the colonial period to the present day. A summary of regulatory agencies for
