BOOK REVIEWS

The Founders of Neurology

Webb Haymaker, M.D., Editor. 1953. Springfield, Illinois: Charles C Thomas, Publisher. 479 pages, 133 illustrations, \$10.50.

This is a most interesting collection of short biographical sketches of 133 neurologists, neuroanatomists, neuropathologists and neurosurgeons, whose work in the past has been of major importance in the development of our present day knowledge of the nervous system and its diseases. Written by 84 prominent living neurologists, and edited by Dr. Webb Haymaker with the collaboration and advice of many more, *The Founders of Neurology* is understandably an uneven book. The biographical sketches range from those of almost telegraphic brevity to a few biographies in which the richness of the prose seems inappropriate. In some instances, the inclusion of unnecessary bibliographic references tends to academic pretentiousness and does not contribute to either ease of reading or literary style. Probably included in an effort "to weave into the text, a running history of neurology" such citations neither add to the biographical interest nor do they, in any way, fulfill their function of presenting even the most abbreviated history of neurology.

Not a few readers will note errors of omission and commission in both the selection of men for inclusion in the book and the choice of biographer for those who are included. This is most understandable when the monumental character of the task is recalled, and it

does not detract from the basic value of the collection but does add to the unevenness of the articles. It is impossible not to compare the present volume with *Neurological Biographies and Addresses* (1936, London, Oxford University Press), which was issued at the opening of the Montreal Neurological Institute. Such a comparison reminds one that biographic brevity and attempts at all-inclusiveness are usually achieved at some expense.

The format and illustrations are excellent. The collection of portraits alone makes the volume a valuable, historical repository. The book would be of most value if it could be used in conjunction with a true history of neurology. As it stands, it is a useful abbreviated biographical dictionary, but the flavor of a true biography is lacking. In no sense of the word is the book truly a history of neurology.

An interesting added feature of this book is the introductory section with short definitions of the European academic terms which are so often mystifying to those whose training and background is entirely American.

The Founders of Neurology is interesting and useful, but leaves the present reviewer unsatisfied and hopeful that a real history of neurology will soon be available.

The extensive historical and scientific treasures of the Army Medical Library and the Armed Forces Institute of Pathology as well as the personal individual resources of the neurologists of the world are pooled in this volume. It memorializes those whose patient investigative efforts and brilliant incisive reasoning have penetrated the darkness of the neural jungle. Eighty-four present-day neurologists have written sketches of 133 founders of neurology and show how they often brilliantly and always honestly pieced together the hypotheses, the suspicions, the intuitive inspirations and the solid hard work at the bedside, the deadhouse and the laboratory. All of the neurological disciplines are represented: Anatomy, Physiology, Pathology, Neurosurgery and Clinical Neurology. The biographies show that the history of neurology cannot be divorced from its pursuit and that all through its past the science of neurology has known no national boundaries.
