Geography David Waugh, 2000 Plate tectonics Earthquakes and volcanoes Weathering and slopes Glaciation Coasts Deserts Weather and climate Soils Biogeography Population Urbanisation Farming and food supply Rural land use Energy resources Manufacturing industries Transport and interdependence World development Proceedings of the Estonian Academy of Sciences, Geology, 2005-09 *The SAGE Handbook of Geomorphology* Kenneth J Gregory, Andrew S Goudie, 2011-06-22 Geomorphology is the study of the Earth's diverse physical land surface features and the dynamic processes that shape these features Examining natural and anthropogenic processes The SAGE Handbook of Geomorphology is a comprehensive exposition of the fundamentals of geomorphology that examines form process and applications of the discipline Organized into five substantive sections the Handbook is an overview of Foundations and Relevance including the nature and scope of geomorphology the origins and development of geomorphology the role and character of theory in geomorphology geomorphology and environmental management and geomorphology and society Techniques and Approaches including observations and experiments geomorphological mapping the significance of models process and form dating surfaces and sediment remote sensing in geomorphology GIS in geomorphology biogeomorphology human activity Process and Environment including the evolution of regolith weathering fluids flows and fluxes sediment transport and deposition hill slopes riverine environments glacial geomorphology periglacial environments coastal environments aeolian environments tropical environments karst and karst processes Environmental Change including landscape evolution and tectonics interpreting quaternary environments environmental change disturbance and responses to geomorphic systems Conclusion including challenges and perspectives and a concluding review The Handbook has contributions from 48 international authors and was initially organized by the International Association of Geomorphologists This will be a much used and much cited reference for researchers in Geomorphology Physical Geography and the Environmental Sciences *Treatise on Geomorphology*, 2013-02-27 The changing focus and approach of geomorphic research suggests that the time is opportune for a summary of the state of discipline The number of peer reviewed papers published in geomorphic journals has grown steadily for more than two decades and more importantly the diversity of authors with respect to geographic location and disciplinary background geography geology ecology civil engineering computer science geographic information science and others has expanded dramatically As more good minds are drawn to geomorphology and the breadth of the peer reviewed literature grows an effective summary of contemporary geomorphic knowledge becomes increasingly difficult The fourteen volumes of this Treatise on Geomorphology will provide an important reference for users from undergraduate students looking for term paper topics to graduate students starting a literature review for their thesis work and professionals seeking a concise summary of a particular topic Information on the historical development of diverse topics within geomorphology provides context for ongoing research discussion of research strategies equipment and field methods laboratory experiments

and numerical simulations reflect the multiple approaches to understanding Earth's surfaces and summaries of outstanding research questions highlight future challenges and suggest productive new avenues for research. Our future ability to adapt to geomorphic changes in the critical zone very much hinges upon how well landform scientists comprehend the dynamics of Earth's diverse surfaces. This Treatise on Geomorphology provides a useful synthesis of the state of the discipline as well as highlighting productive research directions that Educators and students researchers will find useful. Geomorphology has advanced greatly in the last 10 years to become a very interdisciplinary field. Undergraduate students looking for term paper topics to graduate students starting a literature review for their thesis work and professionals seeking a concise summary of a particular topic will find the answers they need in this broad reference work which has been designed and written to accommodate their diverse backgrounds and levels of understanding. Editor in Chief Prof J F Shroder of the University of Nebraska at Omaha is past president of the QGG section of the Geological Society of America and present Trustee of the GSA Foundation while being well respected in the geomorphology research community and having won numerous awards in the field. A host of noted international geomorphologists have contributed state of the art chapters to the work. Readers can be guaranteed that every chapter in this extensive work has been critically reviewed for consistency and accuracy by the World expert Volume Editors and by the Editor in Chief himself. No other reference work exists in the area of Geomorphology that offers the breadth and depth of information contained in this 14 volume masterpiece. From the foundations and history of geomorphology through to geomorphological innovations and computer modelling and the past and future states of landform science, no stone has been left unturned.

Stochastic Population Dynamics in Ecology and Conservation Russell Lande, Steinar Engen, Bernt-Erik Sæther, 2003. All populations fluctuate stochastically creating a risk of extinction that does not exist in deterministic models with fundamental consequences for both pure and applied ecology. This book provides the most comprehensive introduction to stochastic population dynamics combining classical background material with a variety of modern approaches including new and previously unpublished results by the authors illustrated with examples from bird and mammal populations and insect communities. Demographic and environmental stochasticity are introduced with statistical methods for estimating them from field data. The long run growth rate of a population is explained and extended to include age structure with both demographic and environmental stochasticity. Diffusion approximations facilitate the analysis of extinction dynamics and the duration of the final decline. Methods are developed for estimating delayed density dependence from population time series using life history data. Metapopulation viability and the spatial scale of population fluctuations and extinction risk are analyzed. Stochastic dynamics and statistical uncertainty in population parameters are incorporated in Population Viability Analysis and strategies for sustainable harvesting. Statistics of species diversity measures and species abundance distributions are described with implications for rapid assessments of biodiversity and methods are developed for partitioning species diversity into additive components. Analysis of the stochastic dynamics of a tropical

butterfly community in space and time indicates that most of the variance in the species abundance distribution is due to ecological heterogeneity among species so that real communities are far from neutral

Rock Mechanics and Engineering Helin Fu, Wei Chen, Jiajun Fu, 2020-11-25 *Rock Mechanics and Engineering Prediction and Control of Landslides and Geological Disasters* presents the state of the art in monitoring and forecasting geotechnical hazards during the survey and design construction and operation of a railway This volume offers the latest research and practical knowledge on the regularity of disaster causing activities and the monitoring and forecasting of rockfalls landslides and debris flow induced by rainfall and human activity The book gives guidance on how to optimize railway design prevent and control measures during construction and geological hazard remediation The book also advises engineers on how to achieve traffic safety on high speed railways Eleven chapters present best practices in the prediction and control of landslides and rockfalls in geological disasters derived from years of geotechnical engineering research and practice on high speed railways in China High speed railways bring characteristic geotechnical challenges including a complete maintenance system a long railway line and the subjection of the geological body to cyclic loads Since the damage to the geological body is influenced by fatigue as well as rock and soil strength and hydrology the study of geotechnical hazards to high speed rail is very complex Monitoring and predicting such hazards on high speed railways is a significant challenge to their safe construction and operation Presents the latest technical achievement and development trends in landslide and rockfall forecasting Considers the challenges of high speed railways to the prediction and control of geotechnical hazards Gives both in situ and laboratory tests for rockfalls and considers the collapse process of rock slopes Describes the principles of slope monitoring with specific reference to high speed rail Details an automatic monitoring system for geotechnical hazards to high speed rail
