EBOOK: Evidence-based Health Communication Brian Brown,Paul Crawford,Ronald Carter,2006-10-16 What is evidence based health communication and how does it benefit patients How has communication been taught to health professionals and how might it be improved How can health care professionals make the most of short encounters in order to maximise their therapeutic effectiveness for clients This book provides a comprehensive and critical review of the field of health communication and the kinds of evidence that have been

collected concerning effective communication. It also critically evaluates the kinds of training health professionals receive in communication skills and examines its relatively limited role in the curriculum. In addition, it sets out what has been discovered about the micro structure of interaction in health care encounters. The book offers vital new agendas for research training and practice in health care based upon lessons learned from linguistics using a wide variety of gathered evidence to identify patterns that will lead to improved health care practices. Moreover, the book focuses upon brief, ordinary and effective communicative activity in addition to the formal consultations that have been studied by researchers in the past. Evidence-based Health Communication is key reading for trainee health professionals as well as undergraduate and postgraduate students in the fields of health studies, medical sociology and health psychology. It also provides stimulating reading for health care professionals, policy makers and researchers with an interest in improving health communication.

The Pragmatics of Interaction Sigurd D'hondt, Jan-Ola Östman, Jef Verschueren, 2009. The ten volumes of *Handbook of Pragmatics* Highlights focus on the most salient topics in the field of pragmatics, thus dividing its wide interdisciplinary spectrum in a transparent and manageable way. While the other volumes select specific philosophical, cognitive, grammatical, social, cultural, variational or discursive angles, this fourth volume is dedicated to the empirical investigation of the way human beings organize their interaction in natural environments and how they use talk for accomplishing actions and their contexts. Starting from Goffman's observation that interaction exhibits a structure in its own right that cannot be reduced to the psychological properties of the individual nor to society, it contains a selection of articles documenting the various levels of interactional organization. In addition to treatments of basic concepts such as sequence, participation, prosody and style, and some topical articles on phenomena like reported speech and listener response, it also includes overviews of specific traditions: conversation analysis, ethnomethodology and articles on eminent authors Goffman, Sacks, who had a formative influence on the field.
