Small-Scale Map Projection Design Frank Canters, 2002-02-21 The use of computers in cartography has made it easier for map makers to transform data from one map projection to another and experiment with alternative representations of geographical data This has created new challenges and opportunities for map projection scientists Small Scale Map Projection Design focuses on numerical map projection research and is written from the perspective of the map projection user It demonstrates how advances in the measurement of map projection distortion and in the development of low error map projections can help map makers decide what type of map projection is best for their purpose and shows how they can eventually design their own map projections

Rediscovering the World Benjamin Hennig,2012-12-14 We need new maps is the central claim made in this book In a world increasingly influenced by human action and interaction we still rely heavily on mapping techniques that were invented to discover unknown places and explore our physical environment Although the traditional concept of a map is currently being revived in digital environments the underlying mapping approaches are not capable of making the complexity of human environment relationships fully comprehensible Starting from how people can be put on the map in new ways this book outlines the development of a novel technique that stretches a map according to quantitative data such as population The new maps are called gridded cartograms as the method is based on a grid onto which a density equalising cartogram technique is applied The underlying grid ensures the preservation of an accurate geographic reference to the real world It allows the gridded cartograms to be used as basemaps onto which other information can be mapped This applies to any geographic information from the human and physical environment As demonstrated through the examples presented in this book the new maps are not limited to showing population as a defining element for the transformation but can show any quantitative geospatial data such as wealth rainfall or even the environmental conditions of the oceans The new maps also work at various scales from a global perspective down to the scale of urban environments The gridded cartogram technique is proposed as a new global and local map projection that is a viable and versatile alternative to other conventional map projections The maps based on this technique open up a wide range of potential new applications to rediscover the diverse geographies of the world They have the potential to allow us to gain new perspectives through detailed cartographic depictions

Progress in Cartography Georg Gartner,Markus Jobst,Haosheng Huang,2016-05-30 This book gathers the latest developments in modern cartography ranging from the innovative approaches being pursued at national mapping agencies and topographic mapping to new trends in the fields of Atlas Cartography Cartographic Modelling Multimedia Cartography Historical Cartography and Cartographic Education Europe can look back on a long and outstanding history in the field of Cartography and Geoinformation Science Its rich and leading role in the domain of cartography is proven by contributions from various countries and with a diverse range of backgrounds
