Learning to Smell Donald A. Wilson, Richard J. Stevenson, 2006-06-06 Written by a neurobiologist and a psychologist this volume presents a new theory of olfactory perception Drawing on research in neuroscience physiology and ethology Donald A Wilson and Richard J Stevenson address the fundamental question of how we navigate through a world of chemical

encounters and provide a compelling alternative to the reception centric view of olfaction The major research challenge in olfaction is determining how the brain discriminates one smell from another Here the authors hold that olfaction is generally not a simple physiochemical process but rather a plastic process that is strongly tied to memory They find the traditional approach which involves identifying how particular features of a chemical stimulus are represented in the olfactory system to be at odds with historical data and with a growing body of neurobiological and psychological evidence that places primary emphasis on synthetic processing and experiential factors Wilson and Stevenson propose that experience and cortical plasticity not only are important for traditional associative olfactory memory but also play a critical defining role in odor perception and that current views are insufficient to account for current and past data The book includes a broad comparative overview of the structure and function of olfactory systems an exploration into the mechanisms of odor detection and olfactory perception and a discussion of the implications of the authors theory Learning to Smell will serve as an important reference for workers within the field of chemical senses and those interested in sensory processing and perception

Whittaker, 2022-03-01 The untold story of a stunning discovery not only can birds smell but their scents may be the secret to understanding their world Winner of the PROSE Award for Best Book in Popular Science and Mathematics The puzzling lack of evidence for the peculiar but widespread belief that birds have no sense of smell irked evolutionary biologist Danielle Whittaker Exploring the science behind the myth led her on an unexpected quest investigating mysteries from how juncos win a fight to why cowbirds smell like cookies In *The Secret Perfume of Birds* part science part intellectual history and part memoir Whittaker blends humor clear writing and a compelling narrative to describe how scent is important not just for birds but for all animals including humans Whittaker engagingly describes how emerging research has uncovered birds ability to produce complex chemical signals that influence their behavior including where they build nests when they pick a fight and why they fly away Mate choice or sexual selection a still enigmatic aspect of many animals lives appears to be particularly influenced by smell Whittaker s pioneering studies suggest that birds sexy and scary signals are produced by symbiotic bacteria that manufacture scents in the oil that birds stroke on their feathers when preening From tangerine scented auklets to her beloved juncos redolent of moss birds from across the world feature in Whittaker s stories but she also examines the smelly chemicals of all kinds of creatures from iguanas and bees to monkeys and humans Readers will enjoy a rare opportunity to witness the twisting roads scientific research can take especially the challenging hilarious and occasionally dangerous realities of ornithology in the wild *The Secret Perfume of Birds* will interest anyone looking to learn more about birds about how animals and humans use our senses and about why it can sometimes take a rebel scientist to change what we think we know for sure about the world and ourselves
