The Steam Engine Daniel Kinnear Clark,1891 **The Steam Engine: a Treatise on Steam Engines and Boilers ...** Daniel Kinnear Clark,1890 **The Steam Engine, 4** Daniel Kinnear Clark,1824 **GIS Landslide** Hiromitsu Yamagishi,Netra Prakash Bhandary,2017-05-16 This book presents landslide studies using the geographic information system GIS which includes not only the science of GIS and remote sensing but also technical innovations such as detailed light detection and ranging profiles among others To date most of the research on landslides has been found in journals on topography geology geo technology landslides and GIS and is limited to specific scientific aspects Although journal articles on GIS using landslide studies are abundant there are very few books on this topic This book is designed to fill that gap and show how the latest GIS technology can contribute in terms of landslide studies In a related development the GIS Landslide Workshop was established in Japan 7 years ago in order to communicate and solve the scientific as well as technical problems of GIS analyses such as how to use GIS software and its functions The workshop has significantly contributed to progress in the field Included among the chapters of this book are GIS using susceptibility mapping analyses of deep seated and shallow landslides measuring and visualization of landslide distribution in relation to topography geological facies and structures rivers land use and infrastructures such as roads and streets Filled with photographs figures and tables this book is of great value to researchers in the fields of geography geology seismology environment remote sensing and atmospheric research as well as to students in these fields **Falls and Cognition in Older Persons** Manuel Montero-Odasso,Richard Camicioli,2019-10-04 Despite of the enormous efforts of researchers and clinicians to understand the pathophysiology of falls in older adults and establish preventive treatments there is still a significant gap in our understanding and treating of this challenging syndrome particularly when we focus in cognitively impaired older adults Falls in older adults are a very common yet complex medical event being the fifth leading cause of death and a main cause of insidious disability and nursing home placement in our world aging population Importantly falls in the cognitively impaired double the prevalence of the cognitively normal affecting up of 60% of older adults with low cognition and increasing the risk of injuries The past decade has witnessed an explosion of new knowledge in the role of cognitive processes into the falls mechanisms This was also accompanied with clinical trials assessing the effect of improving cognition via pharmacological and non pharmacologic approaches to prevent falls and related injuries Unfortunately this revolution in emerging interventions left a gap between clinician scientists and researchers at academic centers where the new data had been generated and the practitioners who care for cognitively impaired patients with falls Most advances are published in specialty journals of geriatric medicine

neurology and rehabilitation The aim of this book is to reduce this gap and to provide practical tools for fall prevention in cognitively impaired populations The proposed book is designed to present a comprehensive and state of the art update that covers the pathophysiology epidemiology and clinical presentation of falls in cognitively impaired older adults We additionally aim to reduce the knowledge gap in the association between cognitive processes and falls for practitioners from a translational perspective from research evidence to clinical approach We will address gaps and areas of uncertainty but also we will provide practical evidence based guidelines for the assessment approach and treatment of falls in the cognitively impaired populations This book is a unique contribution to the field Existing textbooks on fall prevention focus in global approaches and only tangentially address the cognitive component of falls and not purposely address special populations and or settings as residential care and nursing homes Due to the expected increase of proportion of older adults with cognitive and mobility impairments this book is also valuable for the whole spectrum of the health care of the elderly By including a transdisciplinary perspective from geriatric medicine rehabilitation and physiotherapy medicine cognitive neurology and public health this book will provide a practical and useful resource with wide applicability in falls assessment and prevention
