Tens Of Architecture:

The Anatomy of Architecture Suzanne Preston Blier, 1994 Blier illuminates the extraordinary architecture of the Batammaliba people of Western Africa revealing these buildings as texts through which we can read the beliefs psychology traditions and social concerns of their inhabitants In doing so she explores the role of vernacular architecture as an expression of culture A splendid analysis of the centrality of architecture in the daily lives of the Batammaliba and its integral role in articulating social values The story is beautifully told in the best of anthropological traditions Judith R Blau Contemporary Society A remarkable study Blier s volume carries the study of African architecture to a qualitatively new level of scholarship It introduces a new dimension whereby the architectural medium can be used to illuminate much of the entire belief system of any culture Labelle Prussin African Arts In this excellent book Blier provides a richly detailed and searching account of what architecture means to the Batammaliba of northern Togo and Benin The finest account I have yet read of the relations between systems of beliefs ritual practices and African aesthetics and plastic arts The ethnography and basic insight should be the envy of any social anthropologist T O Beidelman Man

Ten Most Influential Buildings in History Simon Unwin, 2016-07-07 Even the most inventive and revolutionary architects of today owe debts to the past often to the distant past when architecture really was being invented for the first time Architects depend on their own imaginations for personal insights and originality but their ideas may be stimulated consciously or subliminally by particularly powerful buildings from history The Ten Most Influential Buildings in History Architecture's Archetypes identifies ten architectural archetypes that have been sources of inspiration for architects through the centuries Each archetype is analysed through distinctive examples following the methodology established by the author in his previous books The variety of lines of enquiry each archetype has provoked in latter day architects are then explored by analysing their work to reveal ideas inspired by those earlier buildings Archetypes have a timeless relevance In adopting this approach The Ten Most Influential Buildings in History is as pertinent to contemporary practice as it is to understanding buildings from antiquity and offers insights into the bridges of influence that can operate between the two **Architecture**

, 1926 The professional architectural monthly varies **Architecture Competition** Ignaz Strebel, Jan Silberberger, 2017-02-24 Much valued by design professionals controversially discussed in the media regularly misunderstood by the public and systematically regulated by public procurement in recent years architecture competitions have become projection screens for various and often incommensurable desires and hopes Almost all texts on architectural competition engage it for particular reasons whether these be for celebration of the procedure or dismissal Moving on from such polarised views Architecture Competition is a revelatory study on what really happens when competitions take place But the story is not just about architecture and design it is about the whole construction process from the definition of the spatial programme to judgement and selection of projects and the realization of the building This book explores the competition in the building process as it takes place but also before and after its execution It demonstrates that competitions

are not just one step of many to be taken but that competitive design procedures shape the entire process Along the way the book exposes among others one of the key evolutions of design competitions that competition procedures need to be regulated in order to respond to public awarding rules and need to integrate an increasing amount of given standards regarding for example efficiency fire safety and thermal comfort These notions force competing architects to respond to inflexible and overloaded competition programmes instead of focusing on genuinely crafting an architectural project If the architecture competition wants to be more highly valued as a design tool it should pay attention to the iterative nature of design and to the fact that perspectives on the problem often change in process

Design Requirements Engineering: A Ten-Year Perspective Kalle Lyytinen, Pericles Loucopoulos, John Mylopoulos, William N. Robinson, 2009-01-20 Since its inception in 1968 software engineering has undergone numerous changes In the early years software development was organized using the waterfall model where the focus of requirements engineering was on a frozen requirements document which formed the basis of the subsequent design and implementation process Since then a lot has changed software has to be developed faster in larger and distributed teams for pervasive as well as large scale applications with more flexibility and with ongoing maintenance and quick release cycles What do these ongoing developments and changes imply for the future of requirements engineering and software design Now is the time to rethink the role of requirements and design for software intensive systems in transportation life sciences banking e government and other areas Past assumptions need to be questioned research and education need to be rethought This book is based on the Design Requirements Workshop held June 3-6 2007 in Cleveland OH USA where leading researchers met to assess the current state of affairs and define new directions The papers included were carefully reviewed and selected to give an overview of the current state of the art as well as an outlook on probable future challenges and priorities After a general introduction to the workshop and the related NSF funded project the contributions are organized in topical sections on fundamental concepts of design evolution and the fluidity of design quality and value based requirements requirements intertwining and adapting requirements practices in different domains
