**Handbook of Philosophical Logic** Dov M. Gabbay, Franz Guenther, 2013-04-17 It is with great pleasure that we are presenting to the community the second edition of this extraordinary handbook It has been over 15 years since the publication of the first edition and there have been great changes in the landscape of philosophical logic since then The first edition has proved invaluable to generations of students and researchers in formal philosophy and language as well as to consumers of logic in many applied areas The main logic article in the Encyclopaedia Britannica 1999 has described the first edition as the best starting point for exploring any of the topics in logic We are confident that the second edition will prove to be just as good The first edition was the second handbook published for the logic community It followed the North Holland one volume Handbook of Mathematical Logic published in 1977 edited by the late Jon Barwise The four volume Handbook of Philosophical Logic published 1983 1989 came at a fortunate temporal junction at the evolution of logic This was the time when logic was gaining ground in computer science and artificial intelligence circles These areas were under increasing commercial pressure to provide devices which help and or replace the human in his daily activity This pressure required the use of logic in the modelling of human activity and organisation on the one hand and to provide the theoretical basis for the computer program constructs on the other

**Assumptions of Grand Logics** J.K. Feibleman, 2012-12-06 A

system of philosophy of the sort presented in this and the following volumes begins with logic Philosophy properly speaking is characterized by the kind of logic it employs for what it employs it assumes however silently and what it assumes it presupposes The logic stands behind the ontology and is so to speak metaphysically prior One word of caution The philosophical aspects of logic have lagged behind the mathematical aspects in point of view of interest and development The work of N Rescher and others have gone a long way to correct this However their work on philosophical logic has been more concerned with the logical than with the philosophical aspects I have in mind another approach one that would call attention to the ontological systematic meta physics or metaphysical critical ontology aspects whichever term you prefer It is this approach which I have pursued in the following chapters Since together they stand at the head of a system of philosophy which has been developed in some seventeen books a system which ranges over all of the topics of philosophy the chosen approach can be seen as the necessary one But I have not written any logic I have merely indicated the sort of logic that has to be written

**Aspects of Philosophical Logic** Uwe Mönnich, 2012-12-06 This volume constitutes the Proceedings of a workshop on formal semantics of natural languages which was held in Tübingen from the 1st to the 3rd of December 1977 Its main body consists of revised versions of most of the papers presented on that occasion Three supplementary papers those by Gabbay and Smullyan are included because they seem to be of particular interest in their respective fields The area covered by the work of scholars engaged in philosophical logic and the formal analysis of natural languages testifies to the liveliness in those disciplines It would have been impossible to aim at a complete documentation of relevant research within the limits imposed by a short conference whereas concentration on a single topic would have conveyed the false impression of uniformity foreign to a young and active field It is hoped that the essays collected in this volume strike a reasonable balance between the two extremes The topics discussed here certainly belong to the most important ones enjoying the attention of linguists and philosophers alike the analysis of tense in formal and natural languages van Benthem Gabbay the quickly expanding domain of generalized quantifiers Goldblatt the problem of vagueness Kamp the connected areas of pronominal reference Smullyan and presupposition von Stechow and last but not least modal logic as a sort of all embracing theoretical framework Bressan The workshop which led to this collection formed part of the activities celebrating the 500th anniversary of Tübingen University
