Model Neural Networks and Behavior Allen Selverston,2013-06-29 The most conspicuous function of the nervous system is to control animal behavior From the complex operations of learning and mentation to the molecular configuration of ionic channels the nervous system serves as the interface between an animal and its environment To study and understand the fundamental mechanisms underlying the control of behavior it is often both necessary and desirable to employ biological systems with characteristics especially suitable for answering specific questions In neurobiology many invertebrates have become established as model systems for investigations at both the systems and the cellular level Large readily identifiable neurons have made invertebrates especially useful for cellular studies The fact that these neurons occur in much smaller numbers than those in higher animals also makes them important for circuit analysis Although important differences exist some of the questions that would be technically impossible to answer with vertebrates can become experimentally tractable with invertebrates

Ca²⁺ Signaling and Heart Rhythm Ming Lei,Christopher L.-H. Huang,R. John Solaro,Yunbo Ke,2016-07-25 Ca²⁺ is a key second messenger in the intricate workings of

the heart In cardiac myocytes Ca²⁺ signaling controls or modulates electrophysiological function excitation contraction coupling contractile function energy balance cell death and gene transcription Thus diverse Ca²⁺ dependent regulatory processes occur simultaneously within a cell Yet distinct signals can be resolved by local Ca²⁺ sensitive protein complexes and differential Ca²⁺ signal integration In addition to its importance to normal cardiac function such regulation is also crucial in disease conditions Ca²⁺ is likely involved in ectopic cardiac rhythms in both atrial and ventricular tissues through generating triggered activity often appearing as delayed afterdepolarisations particularly following cellular Ca overloading Recent studies also implicate Ca²⁺ in Na channel expression and properties with consequences for conduction velocity and therefore arrhythmic substrate At the cellular level such regulation involves control of the activity of membrane ion channels and Ca²⁺ handling proteins These in turn involve multiple extra and intracellular signaling pathways This e book assembles review and original articles from experts in this field It summarises major recent progress bearing on roles of Ca²⁺ in cardiac electrophysiological function encompassing both normal and abnormal cardiac function These extend from physiological roles of Ca²⁺ signaling in pacemaker function in particular generation of sino atrial pacemaker potentials to pathological roles of abnormal Ca²⁺ signaling in both atrial and ventricular arrhythmogenesis It also seeks to bridge the gap between advances in basic science and development of new therapies

Visceral Perception Gyorgy Ádám, 2013-03-09 Author Gyorgy Adam maintains there is a type of sensory system active within the internal organs that appears to be in some measure independent of the traditional senses Variouslly termed viscerosensory perception internal perception or internal cognition this system operates largely outside of consciousness Adam employs the extensive data he has gathered over many years to demonstrate how hidden internal signals originating in the alimentary tract the cardiovascular system and the kidneys may influence emotional states Visceral Perception is the only comprehensive treatment of this elusive subject
