**The Healing Factor - Vitamin C Against Disease** Irwin Stone, 2017 Vitamin C may save your life A noted biochemist reveals for laymen the exciting research into ascorbic acid s powers against such deadly enemies as cancer heart disease strokes mental illness old age diabetes arthritis kidney disease hepatitis After 40 years research Irwin Stone unfolds his startling conclusion that an ancient genetic mutation has left the primate virtually alone among animals in not producing ascorbic acid Vitamin C in his own body By treating it as a minimum daily requirement instead of the crucial enzyme it really is we are living in a state of sub clinical scurvy whose symptoms have been attributed to other ailments The answer is to change our thinking about Vitamin C and consume enough to replenish this long lost healing factor Stone illustrates with massive documentation

Vitamin C's remarkable ability to fight disease counteract the ill effects of pollution and prolong healthy life easily and inexpensively

**Vitamin C** Alan B. Clemetson, 2018-01-10 The factors affecting blood vitamin C levels are described in detail in this series. Many factors such as aging, smoking, infection, trauma, surgery, hemolysis, hormone administration, heavy metals, pregnancy, alcohol, ionizing radiation, and several medicines have been found to cause a disturbance of ascorbic acid metabolism and to reduce blood vitamin C levels. Indeed, abnormalities of ascorbic acid metabolism due to factors such as smoking occur much more frequently than does dietary vitamin C deficiency today. It is now known that low blood vitamin C levels are associated with histaminemia, high blood histamine levels, and also that ascorbate-responsive histaminemia is common in apparently healthy people. High blood histamine levels are believed to cause small hemorrhages within the inner walls of the blood vessels, and these may lead to the deposition of cholesterol as an aberrant form of wound healing. Ascorbic acid not only reduces blood histamine levels but also aids the conversion of cholesterol to bile acids in the liver. The clinical, pathological, and chemical changes observed in ascorbic acid deficiency are discussed in detail. Several diseases and disorders associated with low blood vitamin C levels are also described. Possible toxic effects resulting from the oxidation of ascorbic acid are noted, and reasons for the use of D-catechin or other chelating fiber to prevent or minimize the release of ascorbate free radical are detailed. An excellent reference for physicians, nutritionists, and other scientists.

**Vitamin C, Infectious Diseases, and Toxins** Thomas E. J. D., 2002-09-30. Review for yourself the incredible evidence over 1 200 literature references that clearly reveals how vitamin C has been able to cure or contribute to the cure of many common infectious diseases including some deemed incurable such as hepatitis and polio. Because of these documented effects, the use of properly dosed vitamin C within a comprehensive treatment protocol can also eliminate the need for many vaccinations and toxic prescription medicines. That vitamin C is the treatment of choice for many potentially fatal toxins and other toxic medical conditions that poison the body for which no effective treatments presently exist. This makes vitamin C the ideal treatment for many infectious diseases that also produce highly toxic poisons and the associated toxic by products of some microbial metabolism. That vitamin C is remarkably free of any side effects. Vitamin C is unquestionably the most non toxic nutrient and supplement that is available today. An enormous amount of scientific literature on vitamin C has been written over the last century. A great deal of this literature, much from our most esteemed research centers in the United States, has been cited in this book. Don't just accept a casual unenlightened assessment of what vitamin C can and cannot do. Read the truth for yourself.

Vitamin C in Health and Disease Tapan Kumar Basu, C. J. Schorah, 1982. Abstract. The biological roles of vitamin C, ascorbic acid, are discussed for nutritionists, physicians, and health and disease researchers. Attention is specifically given to vitamin C metabolism, estimating body reserves of vitamin C, the roles of vitamin C, e.g., as a reducing agent, factors affecting vitamin C reserves and requirements, therapeutic aspects, and safety considerations concerning high vitamin C intake. The synthesis of vitamin C is outlined, details of the breakdown of vitamin C remain unknown. A number of unresolved and often controversial areas are examined in detail. Intake and body reserve levels of vitamin C are suggested which should be appropriate for maintaining health and combating disease.
