AutoCAD Block Best Practices Edwin Prakoso,2017-03-14 Block is one of the most important productivity tools in AutoCAD By optimizing your blocks you will find that AutoCAD is not just about drawing lines or just get the drawings done You can draw lines fast but productivity is beyond that It s not just to get the drawings done You need to be able to modify

drawings easily during the design process You may be able to finish your drawing very quickly but you may spend too much time when you re doing revisions If you do then you re not being productive Drawings also should provide necessary information Furthermore you will want to add some intelligence so you can automate some process This is what AutoCAD Block Best Practices e book is about

Brain Networks for Studying Healthy and Pathological Aging Mechanisms and Intervention Efficacy Christos Frantzidis,Ana B. Vivas,Panagiotis D. Bamidis,2020-11-18 Previous studies showed that both healthy and pathological aging

are associated with changes in brain structure and function of the mature human brain. The most prominent anatomical alterations are changes in prefrontal cortex morphology, volume loss, and reduced white matter integrity and hippocampal atrophy. Cognitive decline affects mainly the performance of episodic memory, speed of sensory information processing, working memory, inhibitory function, and long-term memory. It has been also proposed that due to the aforementioned changes, the aging brain engages in compensatory brain mechanisms such as a broader activation of cortical regions, mainly frontal, rather than specialized activation. Evidence suggests that similar changes occur with pathological aging but to a greater extent. In this case, information flow is disrupted due to neurodegeneration; functional activation of posterior occipito-temporal regions is decreased, and as a consequence, the brain fails to process sensorial input in the ventral pathway, and cognitive deficits appear. In the last years, functional alterations associated with aging have been studied using the mathematical notion of graph theory that offers an integrative approach since it examines different properties of the brain network: 1. Organization level, 2. amount of local information processing, 3. information flow, 4. cortical community structure, and 5. identification of functional anatomical hubs. So graph theory offers an attractive way to model brain networks organization and to quantify their pathological deviations. Previous studies have already employed this mathematical notion and demonstrated that age-related neurodegeneration is often accompanied by loss of optimal network organization, either due to diminished local information processing or due to progressive isolation of distant brain regions. They have also found that changes in network properties may be present even in the preclinical phase, which could be taken as a biological marker of disease.

How Children Learn from Parents and Parenting Others in Formal and Informal Settings: International and Cultural Perspectives, 2nd Edition

Yvette Renee Harris, Claudio Longobardi, 2020-07-28. For several decades, parent-child cognitive interaction researchers have acknowledged that children learn cognitive skills in the context of their social and early environments. These cognitive skills are often imparted to the children by parents or parenting others in formal or informal settings. Thus, for example, such informal settings as dinner table conversations, walks through grocery stores, museums, or

neighborhoods become rich laboratories for children to learn varied cognitive skills ranging from numeracy concepts and language. The way in which those learning opportunities are provided by parents structured by parents and scaffolded by parents may well vary depending on culture and other socio-demographic variables and may well vary depending on formal or informal settings. The aim of this Research Topic is to bring together scholarship from both global north and global south contexts which explores how children learn via parental involvement in formal and informal settings.

Publisher's note: In this 2nd edition the following article has been added: Harris YR and Longobardi C 2020 Editorial How Children Learn From Parents and Parenting Others in Formal and Informal Settings International and Cultural Perspectives *Front Psychol* 11:1026. doi:10.3389/fpsyg.2020.01026

Online and Offline Modulators of Motor Learning Shahabeddin Vahdat, Ovidiu Lungu, Bradley King, Geneviève Albouy, Julien Doyon, 2017-05-25

Both the acquisition of new and the modification of previously acquired motor skills are necessary to achieve optimal levels of motor performance in everyday functioning as well as to attain expert performance levels that are evident in sports and arts. A multitude of factors have been shown to influence the various stages of the learning process from the acquisition i.e. motor memory encoding to the consolidation and subsequent retention of a skill. These factors or modulators can affect learning through online processes taking place during practice of a new motor skill or through offline processes occurring in the absence of task performance i.e. after training sessions. Although much of the recent research from various disciplines has placed an increased emphasis on identifying factors that can influence the motor learning process we lack an integrated understanding of online and offline determinants of motor skill behaviours. Potential motor learning modulators include but are certainly not limited to stress, anxiety, attention, executive functioning, social interaction, stimulus response mapping, training schedule, regimen, learning environment, vigilance, consciousness states including sleep, wakefulness or meditation, brain stimulation, interference as well as resting state brain connectivity. Pathological and non-pathological i.e. development or aging changes in the brain can also be conceptualized as potential modulators. The aim of this Research Topic is to bridge research from the cognitive, sensory, motor and psychological domains using various behavioural paradigms and neuroimaging techniques in order to provide a comprehensive view of the online and offline modulators of motor learning and how they interact to influence motor performance. Critically, the overarching goal is to gain a better understanding of how motor behaviour can be optimized. We believe that merging research from diverse neuroscientific communities would contribute to fulfilling this goal and potentially highlight possible shared neurophysiological mechanisms influencing motor learning.
