History of the European Oil and Gas Industry J. Craig,F. Gerali,F. MacAulauy,R. Sorkhabi,2018 The history of the European oil and gas industry reflects local as well as global political events economic constraints and the personal endeavours of individual petroleum geoscientists as much as it does the development of technologies and the underlying geology of the region The first commercial oil wells in Europe were drilled in Poland in 1853 Romania in 1857 Germany in 1859 and Italy in 1860 The 23 papers in this volume focus on the history and heritage of the oil and gas industry in the key European oil producing countries from the earliest onshore drilling to its development into the modern industry that we know today The contributors chronicle the main events and some of the major players that shaped the industry in Europe The volume also marks several important anniversaries including 150 years of oil exploration in Poland and Romania the centenary of the drilling of the first oil well in the UK and 50 years of oil production from onshore Spain *Fresh* Susanne Freidberg,2010-10-01 That rosy tomato perched on your plate in December is at the end of a great journey not just over land and sea but across a vast and varied cultural history This is the territory charted in *Fresh* Opening the door of an ordinary refrigerator it tells the curious story of the quality stored inside freshness We want fresh foods to keep us healthy and to connect us to nature and community We also want them convenient pretty and cheap *Fresh* traces our paradoxical hunger to its roots in the rise of mass consumption when freshness seemed both proof of and an antidote to progress Susanne Freidberg begins with refrigeration a trend as controversial at the turn of the twentieth century as genetically modified crops are today Consumers blamed cold storage for high prices and rotten eggs but ultimately aggressive marketing advances in technology and new ideas about health and hygiene overcame this distrust Freidberg then takes six common foods from the refrigerator to discover what each has to say about our notions of freshness Fruit for instance shows why beauty trumped

taste at a surprisingly early date In the case of fish we see how the value of a living quivering catch has ironically hastened the death of species And of all supermarket staples why has milk remained the most stubbornly local Local livelihoods global trade the politics of taste community and environmental change all enter into this lively surprising yet sobering tale about the nature and cost of our hunger for freshness      **Archaeology, History, and Predictive Modeling** David G.

This book traces the interacting histories of the disciplines of ecology and economics from their common origin in the ancient Greek concept of oikonomia through their distinct encounters with energy physics to the current obstruction of neoliberal economics to responses to the ecological and climate crisis of the so called Anthropocene Reconstructing their constitution as separate sciences in the era of fossil fuelled industrial capitalism the book offers an explanation of how the ecological sciences have moved from a position of critical collision with mainstream economics in the 1970s to one of collusion with the project of permanent growth in and through the thermal crisis of the biosphere      **Introduction to Management** John R.
