Fractional Calculus And Waves In Linear Viscoelasticity: An Introduction To Mathematical Models Francesco Mainardi, 2010-05-18 This monograph provides a comprehensive overview of the author's work on the fields of fractional calculus and waves in linear viscoelastic media which includes his pioneering contributions on the applications of special functions of the Mittag Leffler and Wright types It is intended to serve as a general introduction to the above mentioned areas of mathematical modeling The explanations in the book are detailed enough to capture the interest of the curious reader and complete enough to provide the necessary background material needed to delve further into the subject and explore the research literature given in the huge general bibliography This book is likely to be of interest to applied scientists and engineers a Smithsonian Miscellaneous Collections, 1922 A Spectroscopic Atlas of the [superscript 2 Sigma Superscript + Minus Superscript 2 Pi] Transition of OH Ann T. Barlow, Steven J. Weinstein, 2025-10-09 This book is the first to offer a systematic methodology for solving nonlinear ordinary differential equations via power series specifically those arising in mathematical physics It provides tools to eliminate the tedious manipulation of infinite series enabling recursive computation of all terms The authors also present a structured approach to overcoming convergence issues inherent to such methods demonstrating that power series solutions can be both accessible and practical The authors teaching philosophy that mathematics is best learned by doing is reflected throughout with the text largely composed of idea driven examples and physically motivated problems from their own research Proofs are included only when necessary for readers to construct custom theorems or definitions relevant to real

world applications Ultimately the book shows that power series methods can effectively complement numerical techniques offering applied mathematicians a powerful and versatile toolset This book is intended for researchers engaged in applied mathematics and is structured so it can be used in a one semester advanced undergraduate or graduate course Necessary course prerequisites are a knowledge of differential equations analytical and numerical methods linear algebra and complex variables
