John M. Pye

Tending Fire Coping With Americas Wildland Fires:

Tending Fire Stephen J. Pyne, 2014-05-14 *Tending Fire* offers a brilliant discussion of the politics of fire by one of the country's most knowledgeable writers on the subject. Pyne examines fire policy and looks at how we have come to this pass and where we might go from here.

Tending Fire Stephen Pyne, 2004-11-16 The wildfires that spread across Southern California in the fall of 2003 were devastating in their scale: twenty-two deaths, thousands of homes destroyed, and many more threatened. Hundreds of thousands of acres burned. What had gone wrong? And why? After years of discussion, fire policy is one of America's most spectacular conflagrations arising now and often not in a remote wilderness but close to large settlements. That is the opening to a brilliant discussion of the politics of fire by one of the country's most knowledgeable writers on the subject. Stephen J. Pyne, once a fire fighter himself for fifteen seasons on the North Rim of the Grand Canyon and now a professor at Arizona State University, Pyne gives us for the first time a book-length discussion of fire policy of how we have come to this pass and where we might go from here. *Tending Fire* provides a remarkably broad, sometimes startling context for understanding fire. Pyne traces the ancient alliance between fire and humanity, delves into the role of European expansion and the creation of fire-prone public lands, and then explores the effects wrought by changing policies of letting burn and suppression. How, the author asks, can we better protect ourselves against the fires we don't want and better promote those we do? Pyne calls for important reforms in wildfire management and makes a convincing plea for a more imaginative conception of fire, though always grounded in a vivid sense of fire's reality. Amid the shouting and roar, a central fact remains, he writes: Fire isn't listening. It doesn't feel our pain. It doesn't care. Really, really, it doesn't care. It understands a language of wind, drought, woods, grass, brush, and terrain, and it will ignore anything stated otherwise. We need to think about fire in more deeply biological ways and recognize ourselves as the fire creatures we are, Pyne argues. Even if in recent times we have gone from being keepers of the flame to custodians of the combustion chamber, tending fire wisely remains our responsibility as a species. The Earth's fire scene, he writes, is largely the outcome of what this creature has done and not done, and the species operates not according to strict evolutionary selection but in the realm of culture, which is to say of choice and confusion. Rich in insight, wide-ranging in its subject, and clear-eyed in its proposals, *Tending Fire* is for anyone fascinated by fire, fire policy, or human culture.

Advances in Threat Assessment and Their Application to Forest and Rangeland Management John M. Pye, 2010 In July 2006, more than 170 researchers and managers from the United States, Canada, and Mexico convened in Boulder, Colorado, to discuss the state of the science in environmental threat assessment. This two-volume general technical report compiles peer-reviewed papers that were among those presented during the 3-day conference. Papers are organized by four broad topical sections: Land, Air, and Water; Fire; and Pests, Biota, and are divided into syntheses and case studies. Land topics include discussions of forest land conversion and soil quality, as well as investigations of species responses to climate change. Air and water topics include discussions of forest vulnerability to severe weather and

storm damage modeling Fire topics include discussions of wildland arson and wildfire risk management as well as how people perceive wildfire risk and uncertainty Pests biota topics include discussions of risk mapping and probabilistic risk assessments as well as investigations of individual threats including the southern pine beetle and *Phytophthora alni* Ultimately this publication will foster exchange and collaboration between those who develop knowledge and tools for threat assessment and those who are responsible for managing forests and rangelands *Surviving Wildfire* Linda Masterson, 2013-01-20 Covers what to do before during and after wildfire disasters Advice for homeowners includes advance preparations for land home and family evacuation essentials and survival strategies when wildfire threatens understanding insurance and rebuilding and recovery *Fire Management in the American West* Mark Hudson, 2011-11-01 Most journalists and academics attribute the rise of wildfires in the western United States to the USDA Forest Service's successful fire elimination policies of the twentieth century However in *Fire Management in the American West* Mark Hudson argues that although a century of suppression did indeed increase the hazard of wildfire the responsibility does not lie with the USFS alone The roots are found in the Forest Service's relationships with other more powerful elements of society the timber industry in particular Drawing on correspondence both between and within the Forest Service and the major timber industry associations newspaper articles articles from industry outlets and policy documents from the late 1800s through the present Hudson shows how the US forest industry under the constraint of profitability pushed the USFS away from private industry regulation and toward fire exclusion eventually changing national forest policy into little more than fire policy More recently the USFS has attempted to move beyond the policy of complete fire suppression Interviews with public land managers in the Pacific Northwest shed light on the sources of the agency's struggles as it attempts to change the way we understand and relate to fire in the West *Fire Management in the American West* will be of great interest to environmentalists sociologists fire managers scientists and academics and students in environmental history and forestry *Wildfire and Americans* Roger G. Kennedy, 2025-09-23 Three years after Roger Kennedy retired as director of the National Park Service from his Santa Fe home he watched as the Cerro Grande Fire moved across the Pajarito Plateau and into Los Alamos Two hundred and thirty five homes were destroyed more than 45 000 acres of forest were burned and the nation's nuclear laboratories were threatened even before the embers had died a blame game erupted Kennedy's career as a public servant which encompasses appointments under five presidential administrations convinced him that the tragedy would produce scapegoats and misinformation and leave American lives at risk That was unacceptable even unforgivable *Wildfire and Americans* is a passionate deeply informed appeal that we acknowledge wildfire not as a fire problem but as a people problem Americans are in the wrong places damningly because they were encouraged to settle there Politicians scientists and CEOs acting out of patriotism hubris and greed have placed their fellow countrymen in harm's way And now with global warming we inhabit a landscape that has become much more dangerous Grounded in the conviction that we owe a duty to our environment and our

fellow man Wildfire and Americans is more than a depiction of policies gone terribly awry It is a plea to acknowledge the mercy we owe nature and mankind *Fighting Fire in the Sierra National Forest* Marcia Penner Freedman, 2015-03-09 To live in the foothills on the periphery of the Sierra National Forest is to live with the certainty of summer wildfires Each year from April forward Californians watch the sky and sniff the air for telltale signs of smoke While fire remains a constant threat the strategy for combating it has evolved with the understanding of its beneficial role in the forest environment Marcia Penner Freedman traces the history of firefighting and fire management from the forest's early years through the policy shifts that began in the 1960s and the measures used today The Public and Wildland Fire Management, 2006 Presents key social science findings from three National Fire Plan sponsored research projects Articles highlight information of likely interest to individuals working to decrease wildfire hazards on both private and public lands Three general topic areas are addressed 1 public views and acceptance of fuels management 2 working with homeowners and communities and 3 tools that can help us understand social issues **Earth Observation of Wildland Fires in Mediterranean Ecosystems** Emilio Chuvieco, 2009-09-25 Wildland fires are becoming one of the most critical environmental factors affecting a wide range of ecosystems worldwide In Mediterranean ecosystems including also South Africa California parts of Chile and Australia wildland fires are recurrent phenomena every summer following the seasonal drought As a result of changes in traditional land use practices and the impact of recent climate warming fires have more negative impacts in the last years threatening lives socio economic and ecological values The book describes the ecological context of fires in the Mediterranean ecosystems and provides methods to observe fire danger conditions and fire impacts using Earth Observation and Geographic Information System technologies *Forest Fires* Philip Nori Omi, 2005-05-23 From killer fires to ecosystem rehabilitation an exhaustive survey exploring the ecological social and economic consequences of managing fires in U S wildland areas Fire management involves protecting natural resources from fire but also using controlled burning for land management purposes Who are the stewards of land management and the researchers who devote their entire careers studying fire How are ecosystems restored after major fires What are the economic ramifications and what assessment tools are available *Forest Fires A Reference Handbook* explores the historical ecological economic and social dimensions of wildland combustion and their impacts in North America Explaining how legislation and public perception have been shaped by historic fires and fire seasons particular emphasis is placed on the summer of 2000 as a way of understanding and managing future fires
