practical roadmap for enhancing spiritual well being Whether you re a novice or an advanced practitioner Atkinson s work provides invaluable insights that are both transformative and enlightening "I" - The Real Self Rittik Chandra,2015-02-06 The Self of each of us has a vehicle of expression which we call the Mind but which vehicle is much larger and far more complex than we are apt to realize Our Self is greater than we know it has peaks above and lowlands below the plateau of our conscious experience That which we know as the conscious mind is not the Soul The Soul is not a part of that which we know in consciousness but on the contrary that which we know in consciousness is but a small part of the Soul the conscious vehicle of a greater Self or I This book has endeavored to bring into realization within your mind the consciousness of the I its independence from the body its immortality its invincibility and invulnerability the superiority of the I over the mind as well as over the body The I is a Center of Consciousness in that great One Reality or Spirit which is behind and back of all Life and Existence the Center of which Reality or Existence is the Absolute or God that the sense of Reality that is inherent in the I is really the reflection of the sense of Reality inherent in the Whole the Great I of the Universe The Evolution of Memory Systems Elisabeth A. Murray,Steven P. Wise,Kim S. Graham,2016-10-27 Current theories about human memory have been shaped by clinical observations and animal experiments This doctrine holds that the medial temporal lobe subserves one memory system for explicit or declarative memories while the basal ganglia subserves a separate memory system for implicit or procedural memories including habits Cortical areas outside the medial temporal lobe are said to function in perception motor control attention or other aspects of executive function but not in memory The Evolution of Memory Systems advances dramatically different ideas on all counts It proposes that several memory systems arose during evolution and that they did so for the same general reason to transcend problems and exploit opportunities encountered by specific ancestors at particular times and places in the distant past Instead of classifying cortical areas in terms of mutually exclusive perception executive or memory functions the authors show that all cortical areas contribute to memory and that they do so in their own ways using specialized neural representations The book also presents a proposal on the evolution of explicit memory According to this idea explicit declarative memory depends on interactions between a phylogenetically ancient navigation system and a representational system that evolved in humans to represent one s self and others As a result people embed representations of themselves into the events they experience and the facts they learn which leads to the perception of participating in events and knowing facts The Evolution of Memory Systems is an important new work for students and researchers in neuroscience psychology and biology *The Science of Reinventing Yourself Rapidly: How to Break Old Patterns and Create a Powerful New Identity* Silas Mary,2025-02-26 Reinvention is not just for celebrities it s a powerful tool anyone can use to transform their life The Science of Reinventing Yourself Rapidly provides the framework for making rapid changes in your life and creating a powerful new identity Whether you re looking to change careers lose weight or simply develop a new mindset this book shows you how to break free from old patterns and adopt new behaviors that
