The Hyperactive Child And Stimulant Drugs:

Stimulant Drugs and ADHD Mary V. Solanto, Amy Frances Torrance Arnsten, F. Xavier Castellanos, 2001 Stimulant drugs are widely used in the treatment of ADHD in children and adults Hundreds of studies over the past 60 years have demonstrated their effectiveness in improving attention span increasing impulse control and reducing hyperactivity and restlessness Despite widespread interest in these compounds however their mechanisms of action in the central nervous system have remained poorly understood Recent advances in the basic and clinical neurosciences now afford the possibility of elucidating these mechanisms The current volume is the first to bring this expanding knowledge to bear on the central question of why and how stimulants exert their therapeutic effects The result is a careful comprehensive and insightful integration of material by well known scientists that significantly advances our understanding of stimulant effects and charts a course for future research Part I presents a comprehensive description of the clinical features of ADHD and the clinical response to stimulants Part II details the cortical and subcortical neuroanatomy and functional neurophysiology of dopamine and norepinephrine systems with respect to the regulation of attention arousal activity and impulse control and the effects of stimulants on these systems Part III is devoted to clinical research including recent studies of neuroimaging genetics pharmacodynamic and pharmacokinetic properties of stimulants effects on cognitive functions neurophysiological effects in humans with and without ADHD and in non human primates and comparison of stimulants and non stimulants in the treatment of ADHD Part IV is a masterful synthesis that presents alternative models of stimulant drug action and generates key hypotheses for continued research The volume will be of keen interest to researchers and clinicians in psychiatry psychology and neurology neuroscientists studying stimulants and those pursuing development of new drugs to treat ADHD
